Beyond Traditional Probabilistic Data Processing Techniques: Interval, Fuzzy etc. Methods and Their Applications Olga Kosheleva, Sergey P. Shary, Gang Xiang, Roman Zapatin, 2020-02-28 Data processing has become essential to modern civilization. The original data for this processing comes from measurements or from experts and both sources are subject to uncertainty. Traditionally probabilistic methods have been used to process uncertainty. However, in many practical situations we do not know the corresponding probabilities in measurements; we often only know the upper bound on the measurement errors. This is known as interval uncertainty. In turn, expert estimates often include imprecise fuzzy words from natural language such as "small"; this is known as fuzzy uncertainty. In this book, leading specialists on interval, fuzzy, probabilistic uncertainty, and their combination describe the state of the art developments in their research areas. Accordingly, the book offers a valuable guide for researchers and practitioners interested in data processing under uncertainty and an introduction to the latest trends and techniques in this area, suitable for graduate students.

Library & Information Science Abstracts, 2001 *Ambient Intelligence with Microsystems* Kieran Delaney, 2008-10-17 *Augmented Materials and Smart Objects* investigates the issues required to ensure technology platforms capable of being seamlessly integrated into everyday objects, particularly the requirements for integrated computation and MEMS sensors. System in a package solutions, multi-chip modules, the impact of the trend towards embedded microelectronic electronics sub-systems, novel assembly techniques for autonomous MEMS sensors, as well as practical performance issues that are key to the AmI concept. Also discussed are current requirements for realizing applications-oriented examples of smart objects, e.g., smart textiles, gadgets, integration of smart systems for utility and environmental monitoring, etc. These are based upon heterogeneous systems linking networks of sensors attached to or physically embedded in objects with information management systems enabling collections of smart objects to collaborate to provide proactive services to the user. Finally, *Augmented Materials and Smart Objects* describes and discusses a number of vision statements strongly relevant to the future development of distributed embedded sensor and actuator platforms for smart objects and ultimately Ambient Intelligence. The framework for this is the concept of Augmented Materials: these are materials with fully embedded distributed information systems designed to measure all relevant physical properties and provide a full knowledge representation of the material. In effect, the material would know itself and its current status.
