

Cooling Theory Lectures Notes

Markus Hupfer and members of the team!

September 7, 2024

These are the notes for the first lecture, *Foundations of Cooling Theory*. These are generalised and give insights on problems for all of the cooling gases, from the perspective of the results on the lecture, the likely contribution to Cooling Theory and the needs of different and their possibilities of their respective studies. I also used several other sources for additional materials such as Part II course book of Cambridge on Cooling Theory and Thermodynamics given by Professor John Kestin, and the other course notes from a Cambridge book on Subatomic Thermodynamics course given by Professor Tim Gaskell. I also included some more recent literature such as Applied Maths for the Phys. Department. The last sentence of the notes is based on Hugh Everett's course notes, "Thought Experiment".

All numbers by these notes are my best!
