Non-Stoichiometric Oxides of 3d Metals. Concentration and Mobility of Electronic and Ionic Defects. Andrzej Stokłosa,2024-10-15 The advancement of material engineering over the last few decades has allowed for the development of modern metallic and ceramic construction materials composites nanomaterials and various kinds of coatings with desired performance characteristics They form the basis for the development of the automotive industry the aviation industry the chemical equipment industry etc They can function in ever higher temperatures and aggressive environments On the other hand the advancement of electronics requires the development of new and cheaper materials

semiconductors insulators materials with magnetic ferrimagnetic or piezoelectric properties etc The desired properties of materials or their surface layers depend on chemical composition dopants and the concentration of point defects through which the transport of ions and electrons takes place The functional properties also depend on the nuances of production technologies which allow to obtain a specific texture and a desired concentration of ionic and electronic point defects The monograph follows up on the issues related to the concentration of charge carriers in pure and doped oxides Based on the diagrams of the concentration of point defects the calculation results of the concentration of charge carriers and their mobility are presented using the results of the studies on the electrical conductivity and the thermoelectric power in some specific oxides of 3d metals In turn the results of calculations of the ionic defect diffusion coefficients conducted using the coefficients of self diffusion and chemical diffusion as well as the concentration of ionic defects in these oxides are presented The given material will be useful to a wide range of researchers and developers of new materials with a wide range of required properties

Membrane Fusion and Syncytial Neuronal Cytoplasmic Connection O.S. Sotnikov, A.A. Laktionova, 2016-06-01 In this monograph for the first time results of systematic studies of cytoplasmic syncytial connections in the vertebrate and invertebrate nervous system are presented It has been shown that in the nervous system apart from chemical synapses and electrical membranous contacts the third type of interneuronal communications exists the cytoplasmic syncytial connection Absolute criteria are developed which allow revealing syncytial connections in light microscopy preparations and in tissue culture plexuses as well as in electron microscopy investigations For the first time the method of artificial syncytial fusion of mass of living neurons in experiment was developed It was shown that neurons like cells of all other types are capable for the enucleation with formation of karyoplasts and cytoplasts This book is of interest to neurophysiologists neuromorphologists and neuropathologists as well as to lecturers in the corresponding general courses about the neuron
