Sustainability Solutions Axel Lindfors,2020-04-08 Sustainable development is one of the most influential visions guiding future societies Encompassed within its vision are various domains where improvements are desirable such as social equity environmental degradation climate change In the work towards sustainable development firms government authorities and individuals face various practical challenges tied to these sustainability domains When facing these challenges they may implement sustainability solutions that is solutions that are framed in the context of contributing to sustainable development This thesis deals with a particular sub set of such sustainability solutions namely integrative and multi functional solutions These solutions are characterized by the ability to

provide different functions through value creation within several different sustainability domains and require organisations or units of organisations to further integrate material energy and informational flows in order to implement the solution. Integrative and multi functional solutions may play an important part in the transition towards sustainable societies since the integration of material energy and informational flows may bring with it synergistic benefits. Furthermore the contribution of these solutions to several different sustainability domains reduces the risk of problem shifting and it may be more cost efficient to have one multi functional sustainability solution than to have one for each sustainability related challenge. However if integration and multi functionality are desirable characteristics of future socio technological systems we need ways to systematically assess them and facilitate their implementation. When it comes to the assessment there is a need to find an assessment methodology that can handle capturing the synergistic benefits and multiple functions of such solutions. Furthermore the methodology also has to conform to the value pluralism inherent to sustainable development. Dealing with this value pluralism when trying to assess which solution among many to implement can be challenging as comparative judgements have to handle potentially conflicting value orientations, goals, empirics and ontologies. As for the facilitation of their implementation, integrative and multi functional solutions tend to be more difficult or at least different to implement than traditional single minded solutions since they require traditionally separate organisations to cooperate. Therefore this thesis aims to contribute to understanding the process of implementing integrative and multi functional solutions. Specifically the thesis explores how to select indicators for assessment, how assessments may aid decision makers to deal with the value pluralism of sustainable development when making comparative judgements and how to strengthen the internal capacity of groups of actors to engage in collective action. Regarding the selection of indicators the thesis suggests two different pathways. Either one may base indicator selections on stakeholder discussions where stakeholders come to a consensus around which indicators are important to assess or one may base indicators on operationalising pre defined sustainability objectives, namely sorting, contextualising and reformulating pre defined sustainability objectives so that they fit the purpose of the assessment. A mix of both pathways is also possible in other words using both stakeholder discussions and the operationalisation of pre defined sustainability objectives to motivate and justify the selection of indicators. As for how assessments may aid decision makers the thesis advocates for a discursive approach based on the primacy of decision support tools over decision making tools. Meaning that the tools should support informed decisions but not make them for the decisionmaker. Here contributions are made in the form of motivations for the discursive qualitative approach to decision making and exemplify how decision support tools may be designed and a method is presented and developed that enables this kind of informed comparative judgements. This method builds on multicriteria decision analysis methodology but makes a few key contributions to the selection of indicators mentioned previously and to how to compare different alternatives and judge which of the alternatives is the preferred. Finally contributions are made to the practice of facilitating integrative and

multi functional solutions through showing how the theory of institutional capacity building can be used to guide design development and evaluation of interventions aimed at facilitating such solutions Institutional capacity building represents the ability of groups of actors to engage in collective action something that seems to be often needed to implement integrative and multi functional solutions Historically this theory has been used to study how different events influenced the capacity of actors to engage in collective action However in research performed within the bounds of this thesis the theory is expanded for use in a proactive manner thereby contributing with insights and inspiration to others that may seek to facilitate the implementation process of integrative and multi functional solutions

Handbook of Social Policy Evaluation Bent Greve,2017-03-31 This Handbook uses methodologies and cases to discover how and when to evaluate social policy and looks at the possible impacts of evaluation on social policy decisions The contributors present a detailed analysis on how to conduct social policy evaluation how to be aware of pitfalls and dilemmas and how to use evidence effectively

Multifunctional Rural Land Management Floor Brouwer,C. Martijn van der Heide,2012-05-16 The increasing demand for rural land and its natural resources is creating competition and conflicts Many interested parties including farmers nature conservationists rural residents and tourists compete for the same space Especially in densely populated areas agriculture recreation urban and suburban growth and infrastructure development exert a constant pressure on rural areas Because land is a finite resource spatial policies which are formulated and implemented to increase the area allocated to one use imply a decrease in land available for other uses As a result at many locations multi purpose land use is becoming increasingly important This notion of multi purpose land use is reflected in the term multifunctionality This volume provides insights into viable strategies of sustainable management practices allowing multiple functions sustained by agriculture and natural resources in rural areas It shows how the rural economy and policies can balance and cope with these competing demands and includes numerous case studies from Europe North America and developing countries

*Cost-Benefit Analysis for Public Sector Decision Makers* Diana Fuguitt,Shanton J. Wilcox,1999-10-30 Fuguitt and Wilcox skillfully guide analysts public sector managers and students of decision making through a full range of the essential steps to perform interpret and assess cost benefit analysis Their book shows how to grasp the principles of cost benefit analysis and several related economic valuation methods how to apply them in undertaking an objective analysis and how to use the analysis as a decision making tool across a wide range of fields and applications An extensive knowledge of economic theory calculus or advanced graphical analysis is not needed to understand the principles or techniques Accessible to those who understand basic algebra and have a beginner's hold on statistics the book also provides a bridge to the more advanced literature in economics and to other analyses used to perform sophisticated valuations A unique much needed presentation of all that is required to gain an immediate useful understanding of the topic The authors explain basic economic concepts and show how they are relevant to understanding an analytical approach They enumerate principles and detail such technical components as with and without analysis

discounting decision criteria and uncertainty assessment The book provides especially extensive coverage of the contingent valuation method along with market valuation the travel cost and property value methods human life valuation and cost effectiveness analysis They explain empirical methods used to perform these valuation techniques and cover survey and regression analysis as well Most importantly Fuguitt and Wilcox treat the topic within its real world context as a decision making tool to assess a particular policy s efficiency and to provide the decision maker with necessary information Trade offs between efficiency and other policy objectives are also addressed as is the interdisciplinary setting within which cost benefit analysis is interpreted enabling readers to understand that policy advocates and adversaries bring their own values and competing interests to bear on any decision making process
