Software Process Improvement and Product Line Practice Lawrence G. Jones,Albert L. Soule,2002 Abstract Many organizations report dramatic benefits from the adoption of software product line practice

Organizations that have established software engineering process discipline are better poised to succeed with product lines. While we acknowledge that there are different paths to successful process discipline in this technical note we concentrate on approaches based on the Capability Maturity Model Integration (CMMI) models. We describe practices that are most crucial to product line success. While some of these relate directly to the CMMI models process areas others are uniquely important to product lines. In this technical note we first present fundamental concepts of software product lines. We then describe important product line practices as they have been documented in A Framework for Software Product Line Practice framework. We next present an overview of the CMMI models followed by a description of the general relationships between the framework and CMMI models. We amplify this comparison with a detailed example showing the relationship between configuration management practices in CMMI and in the framework. We conclude by describing the ways in which organizations can build upon their process improvement efforts to achieve success with product lines and realize additional benefits through the use of both technologies.
