The School of Mathematics at Rome's University Campus Simona Salvo, 2022-09-28 The School of Mathematics is a masterpiece of the early 1930s by Gio Ponti who is today regarded as a master of Italian Modernism Although World War II bombings shattered the coloured stained glass window that once adorned the balanced and harmonious white travertine facade the building remains a striking and significant piece of architecture Although it underwent a series of transformations over the years before its historical and artistic relevance was recognised it can still be appreciated and admired for its magnificent expressivity Its uniqueness derives from its complexity such as is often found in Italian monuments of all ages a rare synthesis of urban design architecture art industrial design historical archives and perhaps the first of its kind scientific production in the field of mathematics This illustrated report is a synopsis of the extensive technical research documents produced by the research team for each step of the work It is also a premise for the conservation management plan proposed at the end of the full report As in any area of science knowledge is at the basis of future action we need to understand today how to take care of the historical buildings of our campus tomorrow buildings recognised worldwide as architectural and historical monuments

The Oxford Handbook of Identities in Organizations Andrew D. Brown, 2020-01-16 Conceived as the meanings that individuals attach to their selves a substantial stockpile of theory related to identities accumulated across the arts social sciences and humanities over many decades continues to nourish contemporary research on self identities in organizations In times which are more reflexive narcissistic and fluid the identities of participants in organizations are increasingly less fixed and less certain making identity issues both more salient and more interesting Particular attention has been given to processes of identity construction often styled identity work Research has focused on how why and when such processes occur and their implications for organizing and individual group and organizational outcomes This has resulted in a burgeoning stream of research from discursive dramaturgical symbolic socio cognitive and psychodynamic perspectives that most often casts individuals efforts to fabricate identities as intentional relational and consequential Seemingly intractable debates centred on the nature of identities their relative stability or fluidity whether they are best regarded as coherent or fractured positive or not and how they are fabricated within relations of power

combined with other conceptual issues continue to invigorate the field. However, these debates have also led to some scepticism regarding the future potential of identities research. Yet, as the chapters in this Handbook demonstrate, there are considerable grounds for optimism that identity as root metaphor, nexus concept, and means to bridge levels of analysis has significant potential to generate multiple compelling streams of theorizing in organization and management studies.
