Miley,2021-02-25 The exciton mechanism of high Tc superconductivity in copper oxides was initially proposed by Prof J Bardeen His insight is largely shared by another luminary in superconductivity Prof V L Ginzburg The main author of the book Dr Nie Luo was motivated by their insights to give a geometrical explanation to the excitonic Coulomb interaction and has developed a unique formalism to understand and predict physical properties of high Tc superconductors This work is supported by increasingly strong evidence for electron hole interactions in p type cuprates The presence of electrons in hole doped cuprates is revealed by the works of the authors and many others including the late Prof L P Gor'kov The book also tries to understand the interlayer Coulomb ILC pairing model by the excitonic Coulomb interaction Developed by Prof A J Leggett ILC theory shares many

views with Ginzburg's approach. The other author of the book, Prof. George H. Miley, shares with us his personal experience with Prof. Bardeen on the exciton's role in physics problems including high T_c superconductivity. The results and predictions of this excitonic-Coulomb mechanism have been verified by an increasing number of experiments. This book summarizes the current status and fathoms future directions.
