Security in Computing Systems Joachim Biskup, 2008-11-14 This monograph on Security in Computing Systems Challenges Approaches and Solutions aims at introducing surveying and assessing the fundamentals of security with respect to computing Here computing refers to all activities which individuals or groups directly or indirectly perform by means of computing systems i.e. by means of computers and networks of them built on telecommunication We all are such individuals whether enthusiastic or just bowed to the inevitable So as part of the information society we are challenged to maintain our values to pursue our goals and to enforce our interests by consciously designing a global information infrastructure on a large scale as well as by appropriately configuring our personal computers on a small scale As a result we hope to achieve secure computing Roughly speaking computer assisted activities of individuals and computer mediated cooperation between individuals should happen as required by each party involved and nothing else which might be harmful to any party should occur The notion of security circumscribes many aspects ranging from human qualities to technical enforcement First of all in considering the explicit security requirements of users administrators and other persons concerned we hope that usually all persons will follow the

stated rules but we also have to face the possibility that some persons might deviate from the wanted behavior whether accidentally or maliciously
