**Conceptual Physics** Jae R. Ballif, William E. Dibble, 1969 **Conceptual Physics--a New Introduction to Your Environment**, 1981 **Learning From Text Across Conceptual Domains** Cynthia R. Hynd, 2013-12-16 This volume is an attempt to synthesize the understandings we have about reading to learn Although learning at all ages is discussed in this volume the main focus is on middle and high school classrooms critical spaces of learning and thinking The amount of knowledge presented in written form is increasing and the information we get from texts is often conflicting We are in a knowledge explosion that leaves us reeling and may effectively disenfranchise those who are not keeping up There has never been a more crucial time for students to understand learn from and think critically about the information in various forms of text Thus understanding what it means to learn is vital for all educators Learning from text is a complex matter that includes student factors social ethnic and cultural differences as well as varying motivations self perceptions goals and needs instructional and teacher factors and disciplinary and social factors One important goal of the book is to encourage practicing teachers to learn to consider their students in new ways to see them as being influenced by and as influencing not just the classroom but the total fabric of the disciplines they are learning Equally important it is intended to foster further research efforts from local studies of classrooms by teachers to large scale studies that produce generalizable understandings about learning from text This volume a result of the editor's and

Honoré Fabri and the Concept of Impetus: A Bridge between Conceptual Frameworks Michael Elazar, 2011-05-20 This book discusses the impetus based physics of the Jesuit natural philosopher and mathematician Honor Fabri 1608 1688 a senior representative of Jesuit scientists during the period between Galileo's death 1642 and Newton's Principia 1687 It shows how Fabri while remaining loyal to a general Aristotelian outlook managed to reinterpret the old concept of impetus in such a way as to assimilate into his physics building blocks of modern science like Galileo's law of fall and Descartes principle of inertia This account of Fabri's theory is a novel one since his physics is commonly considered as a dogmatic rejection of the New Science not essentially different from the medieval impetus theory This book shows how New Science principles were taught in Jesuit Colleges in the 1640s thus depicting the sophisticated manner in which new ideas were settling within the lion's den of Catholic education
