Constructing the User Interface with Statecharts

Behind most non-trivial user interface screens lie complex webs of code that many practitioners in the software industry find difficult to control. Despite the obvious power and sophistication of user interface development tools, the majority of user interface software is difficult to understand because it is coded without an overall design. In this book, Ian Horrocks presents a proven technique for designing event-driven software using the UCM architecture and the statechart notation. The statechart approach to constructing user interface software results in code that can be:
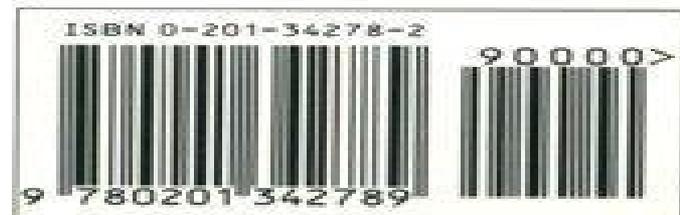

- written quickly and easily,
- tested using white box techniques,
- repeatedly enhanced over the lifetime of a system,
- modified with a minimal risk of introducing unwanted side-effects,
- regression tested without the need for full re-tests.

This book provides a practical guide to constructing real user interfaces for real projects. It is primarily written for practising software engineers, but will also be invaluable to students wishing to gain an insight into user interface construction.

Ian Horrocks is a professional software engineer working for BT, where he heads a team of developers designing user interface software.

Constructing The Interface With Statecharts:

    Constructing the User Interface with Statecharts Ian Horrocks,1999 Readers will learn how to design implement and test high quality user interface software rapidly while using it with any Graphic User Interface GUI development tool This book allows developers to work at the design level and never have to drop down the code *Task Models and Diagrams for User Interface Design* Marco Winckler,Hilary Johnson,Philippe Palanque,2007-11-22 This book constitutes the refereed proceedings of the 6th International Workshop on Task Models and Diagrams for User Interface Design TAMODIA 2007 held in Toulouse France in November 2007 The workshop features current research and gives some indication of the new directions in which task analysis theories methods techniques and tools are progressing The papers are organized in topical sections *Computer-Aided Design of User Interfaces IV* Robert J.K. Jacob,Quentin Limbourg,Jean Vanderdonckt,2006-03-07 Computer Aided Design of User Interfaces IV gathers the latest research of experts research teams and leading organisations involved in computer aided design of user interactive applications supported by software with specific attention for platform independent user interfaces and context sensitive or aware applications This includes innovative model based and agent based approaches code generators model editors task animators translators checkers advice giving systems and systems for graphical and multimodal user interfaces It also addresses User Interface Description Languages This books attempts to emphasize the software tool support for designing user interfaces and their underlying languages and methods beyond traditional development environments offered by the market It will be of interest to software development practitioners and researchers whose work involves human computer interaction design of user interfaces frameworks for computer aided design formal and semi formal methods web services and multimedia systems interactive applications and graphical user and multi user interfaces *Interactive Systems. Design, Specification, and Verification* Joaquim Jorge,Nuno Jardim Nunes,Joao Falcao e Cunha,2003-10-09 This book constitutes the thoroughly refereed post proceedings of the 10th International Workshop on Design Specification and Verification of Interactive Systems DSV IS 2003 held in Funchal Madeira Island Portugal in June 2003 The 26 revised full papers and 5 revised short papers presented together with an invited paper have passed through two rounds of reviewing selection and improvement The papers are organized in topical sections on test and evaluation Web and groupware tools and technologies task modeling model based design mobile and multiple devices UML and specification languages <u>Taming HAL</u> Asaf Degani,2004-01-17 Machines dominate our lives from alarm clocks that wake us up in the morning to radios that lull us to sleep Most of our interactions with automated machines and computers are problem free but more often than we would like they can be irritating and confusing This is frequently harmless such as a VCR recording the wrong show but when it involves a critical system like an autopilot or medical device it can be a matter of life or death Taming HAL seeks to explain these miscommunications between humans and machines by exploring user interfaces of everyday devices Degani examines thirty different systems for

human use including watches consumer electronic products Internet applications cars medical equipment navigation systems onboard cruise ships and autopilots of commercial aircraft Readers will discover why interfaces between people and machines all too often do not work and what needs to be done to avoid potential tragedies   IHM-HCI 2001 Jean Vanderdonckt,Ann Blandford,Alain Derycke,2001   **The Unified Modeling Language** ,2003   **Advanced Information Systems Engineering** ,2001   Cumulated Index to the Books ,1999   **Software Engineering of Fault Tolerant Systems** Patrizio Pelliccione,2007 When architecting dependable systems fault tolerance is required to improve the overall system robustness Many studies have been proposed but the solutions are usually commissioned late during the design and implementation phases of the software life cycle e g Java and Windows NT exception handling thus reducing the error recovery effectiveness Since the system design typically models only normal behaviors of the system while ignoring exceptional ones the generated system implementation is unable to handle abnormal events Consequently the system may fail in unexpected ways due to some faults Researchers have advocated that fault tolerance management during the entire life cycle improves the overall system robustness and that different classes of exceptions must be identified for each identified phase of software development depending on the abstraction level of the software system being modeled This book builds on this trend and investigates how fault tolerance mechanisms can be used when engineering a software system New problems will arise new models are needed at different abstraction levels methodologies for mode driven engineering of such systems must be defined new technologies are required and new validation and verification environments are necessary
