Introduction to Visual Computing Aditi Majumder,M. Gopi,2018-01-31 Introduction to Visual Computing Core Concepts in Computer Vision Graphics and Image Processing covers the fundamental concepts of visual computing Whereas past books have treated these concepts within the context of specific fields such as computer graphics computer vision or image processing this book offers a unified view of these core concepts thereby providing a unified treatment of computational and mathematical methods for creating capturing analyzing and manipulating visual data e g 2D images 3D models Fundamentals covered in the book include convolution Fourier transform filters geometric transformations epipolar geometry 3D reconstruction color and the image synthesis pipeline The book is organized in four parts The first part provides an exposure to different kinds of visual data e g 2D images videos and 3D geometry and the core mathematical techniques

that are required for their processing e.g interpolation and linear regression The second part of the book on Image Based Visual Computing deals with several fundamental techniques to process 2D images e.g convolution spectral analysis and feature detection and corresponds to the low level retinal image processing that happens in the eye in the human visual system pathway The next part of the book on Geometric Visual Computing deals with the fundamental techniques used to combine the geometric information from multiple eyes creating a 3D interpretation of the object and world around us e.g transformations projective and epipolar geometry and 3D reconstruction This corresponds to the higher level processing that happens in the brain combining information from both the eyes thereby helping us to navigate through the 3D world around us The last two parts of the book cover Radiometric Visual Computing and Visual Content Synthesis These parts focus on the fundamental techniques for processing information arising from the interaction of light with objects around us as well as the fundamentals of creating virtual computer generated worlds that mimic all the processing presented in the prior sections The book is written for a 16 week long semester course and can be used for both undergraduate and graduate teaching as well as a reference for professionals

Learning Computer Graphics Shalini Govil-Pai,Rajesh Pai,2012-12-06 Modeling creating objects in three dimensional space Animation assigning a time varying geometry and behavior to the modeled object Rendering creating a photorealistic image of the modeled object Image Manipulation enhancing rendered images to produce desired special effects This book is organized to give the reader a clear and concise over view of the above basic principles in computer graphics New concepts introduced in a chapter are illustrated by hands on projects using the software provided The chapters are organized as described below Chapter 1 providesanoverviewofcomputergraphics CG andhow it has evolved It includes an introduction to computer graphics terminology and definitions Chapter 2 describes what modeling means in CG The concept of wire frame models is elucidated Basic models sphere cube cylinder cone polygon are covered and an insight into polygonal representations of other complex objects is also provided The projects included in this chapter involve use of modeling concepts learned in the chapter Chapter 3 discusses animation in detail Principles of frame animation and real time animation are explained The reader is given the opportunity to animate the modeled objects from Chapter 2 Chapter 4 covers rendering of the wire frame objects created in Chapter 2 The fundamentals oflighting shading and texture mapping are discussed The objects created in Chapter 2 are rendered by the user and the complete animation is seen in a rendered form
