

## INTRODUCTION TO ASPEN PLUS SIMULATION

### What is Process Simulation/Analysis?

The purpose of process simulation is to model and predict the performance of a process. It involves the development of the process into the mathematical elements (e.g. units) and subsequent study of performance. The process identification is e.g. flowsheet, instrumentation, composition, process operation, equipment sizes, etc. It can be carried out using analysis techniques (flow simulation, steady state simulation) or fully integrated simulation and integration software (e.g. ASPEN Plus). In addition, process analysis may involve the use of sophisticated tools to predict and evaluate performance. Examples of process simulation, not yet given, are process design and diagnosis and are described in greater process scope (Fig. 1). The tool used here is ASPEN Plus. It is a comprehensive software package which uses the underlying physical relationships (e.g., material and energy balances, thermodynamic equations, rate equations to predict process performance (e.g., stream properties, operating conditions, and equipment sizes).

Fig. 1. Process Simulation Problem

There are several advantages of computer-aided simulation:

- Allows the designer to quickly test the performance of complex process alternatives and provide feedback to the process synthesis activities.
- Can be incorporated into process synthesis to finding optimum integrated designs.
- Minimizes experimental and scale-up efforts.
- Explains process flexibility and sensitivity by answering "what-if" questions.
- Quantitatively predicts the process and plant design/operating performance.

Expensive errors in conventional design involving use of the existing model of computer-aided simulation:

- Excessive complexity over the simplified RST simulation model.
- The conventional model generally is based on the design model given the simulation.
- The ASPEN Plus simulation predicts that the simulated model under physical process conditions may not be able to allow the simulated process size of the model of given model.
