

Solutions to Assignment #4 Chapter 5

5. The critical path lengths of an unfolded DFG only increase when a new arc is generated with no delays in the DFG; otherwise the path lengths remain the same. An arc with D delays in the original DFG produces $J-D$ arcs with no delays in the J -unfolded DFG when $J > D$.

If $J > D$, then the J unfolded graph will contain an additional arc without delays, and the path length for the J -unfolded DFG increases through those nodes, compared to the $(J-1)$ unfolded DFG.

Therefore, the critical path of the J -unfolded graph is greater than or equal to that of the $(J-1)$ unfolded graph.

7. The DFG is given as

The computation for the critical path $A \rightarrow B \rightarrow E$ is given as $12 \text{ u.t.} = T_{crit}^0$.

Following the algorithm given in Problem 6, we have:

$$T_{crit}^0 = 2 + 5 + 5 = 12;$$

$$J' = \left\lceil \frac{12}{8} \right\rceil = 2$$

Applying unfolding of degree 2 we get

Parhi Solution Unfolding
