Computational Studies, Nanotechnology, and Solution Thermodynamics of Polymer Systems Mark D.

Dadmun, W. Alexander Van Hook, Donald W. Noid, Yuri B. Melnichenko, Robert G. Sumpter, 2007-05-08 This text is the published version of many of the talks presented at two symposiums held as part of the Southeast Regional Meeting of the American Chemical Society SERMACS in Knoxville TN in October 1999 The Symposiums entitled Solution Thermodynamics of Polymers and Computational Polymer Science and Nanotechnology provided outlets to present and discuss problems of current interest to polymer scientists It was thus decided to publish both proceedings in a single volume The first part of this collection contains printed versions of six of the ten talks presented at the Symposium on Solution Thermodynamics of Polymers organized by Yuri B Melnichenko and W Alexander Van Hook The two sessions further described below stimulated interesting and provocative discussions Although not every author chose to contribute to the proceedings volume the papers that are included faithfully represent the scope and quality of the symposium The remaining two sections are based on the symposium on Computational Polymer Science and Nanotechnology organized by Mark D Dadmun Bobby G Sumpter and Don W Noid A diverse and distinguished group of polymer and materials scientists biochemists chemists and physicists met to discuss recent research in the broad field of computational polymer science and nanotechnology The two day oral session was also complemented by a number of poster presentations The first article of this section is on the important subject of polymer blends M D

Designing Microwave Sensors for Glucose Concentration Detection in Aqueous and Biological

Solutions Carlos G. Juan, 2021-06-14 This book presents a comprehensive study covering the design and application of microwave sensors for glucose concentration detection with a special focus on glucose concentration tracking in watery and biological solutions This book is based on the idea that changes in the glucose concentration provoke variations in the dielectric permittivity of the medium Sensors whose electrical response is sensitive to the dielectric permittivity of the surrounding media should be able to perform as glucose concentration trackers At first this book offers an in depth study of

the dielectric permittivity of water glucose solutions at concentrations relevant for diabetes purposes in turn it presents guidelines for designing suitable microwave resonators which are then tested in both water glucose solutions and multi component human blood plasma solutions for their detection ability and sensitivities Finally a portable version is developed and tested on a large number of individuals in a real clinical scenario All in all the book reports on a comprehensive study on glucose monitoring devices based on microwave sensors It covers in depth the theoretical background provides extensive design guidelines to maximize sensitivity and validates a portable device for applications in clinical settings
