**design review**—A technique for evaluating a proposed design to ensure that the design (1) is supported by adequate materials and materials that are available on a timely basis, (2) will perform successfully during use, (3) can be manufactured at low cost, and (4) is suitable for prompt field maintenance.

**deterministic models**—Models where no uncertainty is included (e.g., inventory models without safety stock considerations).

**deviation**—The difference, usually the absolute difference, between a number and the mean of a set of numbers, or between a forecast value and the actual value.

In the second phase—the remedial journey—the team journeys from the cause to its remedy.

**diagnostic study**—A brief investigation or cursory methods study of an operation, process, group, or individual to

discover causes of operational difficulties or problems for which more detailed remedial studies may be feasible. An appropriate work measurement technique may be used to evaluate alternatives or to locate major areas requiring improvement.

**differentiated marketing**—Marketing to different market segments with a different marketing strategy for each segment.

**direct costing**—Syn: variable costing.

**direct costs**—1) In traditional cost accounting, variable costs that can be directly attributed to a particular job or operation. Direct material and direct labor are traditionally considered direct costs. 2) In activity-based cost (ABC) accounting, a cost that can specifically be traced and is economically feasible to track to a particular cost object (e.g., the units produced, a production line, a department, a manufacturing plant). In contrast, if the cost must be allocated across various cost objects, it is an indirect cost. Based on the cost object under consideration, the classification of direct and indirect can change. ABC accounting assumes that more costs traditionally viewed as fixed costs are variable and can be traced to cost objects.

**direct-deduct inventory transaction processing**—A method of inventory bookkeeping that decreases the book (computer) inventory of an item as material is issued from stock, and increases the book inventory as transactions processed for each item. The key concept here is that the book record is updated coincidentally with the movement of material out of or into stock. As a result, the book record is a representation of what is physically in stock. Syn: discrete issue.
