Conference,2002 On the threshold of the 3rd Millennium there can be no doubt about the fact that advances progress of modern society are Technology driven There is still an ever increasing demand for Engineers at many different levels Nonetheless the skills and attitudes required of them are constantly changing given that they must match developments which take place at an ever increasing rate Hence Engineering educators and to greater extent all stake holders in the world of scientific and technological training are looking forward to the model of a more flexible inter disciplinary shaped and innovation oriented kind of Engineers perhaps an Artist Engineer Is the ideal model what we refer to as The Renaissance Engineer of Tomorrow a suitable one for the today times Does such a model exist at all and if yes does it really satisfy the needs of our society The 30th Sefi Annual Conference is a forum which is open for the development of such a discussion amongst scientists educators professionals industrialists students and all those involved and or interested in the debate Primarily its purpose is to better identify and re shape our concept of the ideal Engineer as envisaged for the future no matter how we call such model Such a concept involves the ability to manage interaction between the many different branches of scientific and technical knowledge as well as the skills

associated with the adaptability and flexibility to handle tasks in a truly innovative manner coupled with the positive attitude of life long learning ethical awareness and respect in our approach to a sustainable and socially committed development etc All the above issues clearly define the profile of a graduate far beyond the limited interpretation of the Anglo Saxon word Engineer i e challenging himself to change his her perception of his her role in the design process as one moves beyond the simple act of making decisions based on codes and calculations All this requires a multi cultural education enriched through mobility during one s period of study a marked team work attitude in an international environment the acceptance of challenging competitiveness in terms of ideas and improved efficiency of both processes and products how does one go about developing all these graduate skills through a simple Engineering degree And how to solve the evident contradiction between the aspiration to educate an Artist Engineer necessarily an elitary group and the need of delivering a suitable technical education to the many young people who are requested in engineering such to allow them to work and correctly and safely produce for the society More than 120 contributions responded to SEFIrenze 2002 call for papers form 30 different countries almost all over the world Their presence highlights the interest that the evocative issue of the Renaissance Engineer of Tomorrow has drawn everyone is dreaming something figuring out his her own idea of the task and handbut perhaps no single individual can really define what it is exactly Let us therefore dream of our future Engineers as people who will work with respect and awareness of different traditions and heritage Let us envisage them as human bridges across different cultures and regions linking people all over the world by means of science and technology In this way we can draw inspiration from our glorious Roman past which teaches us that the Highest Authority the Pontiff took his privileged title from Pontifex Maximus the ancient latin Pontesfacere i e the Bridge maker Claudio Borri Union List of Serials in Libraries of the United States and Canada ,1945 *Who is who in Lithuania* ,2006 **National Union Catalog, 1980** ,1981
