Artificial Intelligence Foundations Of Computational Agents:

   Artificial Intelligence David L. Poole,Alan K. Mackworth,2017-09-25 Artificial Intelligence presents a practical guide to AI including agents machine learning and problem solving simple and complex domains   **Logic Programming and Nonmonotonic Reasoning** James Delgrande,Wolfgang Faber,2011-05-02 This volume contains the refereed proceedings of the 11th International Conference on Logic Programming and Nonmonotonic Reasoning LPNMR 2011 held in May 2011 in Vancouver Canada The 16 revised full papers 13 technical papers 1 application description and 2 system descriptions and 26 short papers 16 technical papers 3 application description and 7 system descriptions which were carefully reviewed and selected from numerous submissions are presented together with 3 invited talks Being a forum for exchanging ideas on declarative logic programming nonmonotonic reasoning and knowledge representation the conference aims to facilitate interactions between those researchers and practitioners interested in the design and implementation of logic based programming languages and database systems and those who work in the area of knowledge representation and nonmonotonic reasoning   Artificial Intelligence and Machine Learning Shoaib Irfan Mohammed ,2025-10-29 Artificial Intelligence AI and Machine Learning ML are rapidly advancing fields that focus on creating systems capable of performing tasks that normally require human intelligence These tasks include learning from experience recognizing patterns making decisions solving problems and adapting to new situations Artificial Intelligence is the broader concept that aims to build intelligent machines Machine Learning is a subset of AI that enables systems to automatically learn and improve from data without being explicitly programmed   *Human-Centered AI* Ben Shneiderman,2022-01-13 The remarkable progress in algorithms for machine and deep learning have opened the doors to new opportunities and some dark possibilities However a bright future awaits those who build on their working methods by including HCAI strategies of design and testing As many technology companies and thought leaders have argued the goal is not to replace people but to empower them by making design choices that give humans control over technology In Human Centered AI Professor Ben Shneiderman offers an optimistic realist s guide to how artificial intelligence can be used to augment and enhance humans lives This project bridges the gap between ethical considerations and practical realities to offer a road map for successful reliable systems Digital cameras communications services and navigation apps are just the beginning Shneiderman shows how future applications will support health and wellness improve education accelerate business and connect people in reliable safe and trustworthy ways that respect human values rights justice and dignity   *Cura Animarum* Ioan C. Veres,2025-04-25 As artificial intelligence advances healthcare faces a profound ethical question Can machines truly care This book critically examines the rise of AI driven social robots carebots in patient care evaluating their benefits and potential harms through the lens of Christian ethics While AI may enhance efficiency and offer support in specific healthcare contexts it also risks dehumanizing care replacing genuine human presence with technological substitutes Grounded in a theology of covenant care this work

builds its ethical argument around the biblical parable of the Good Samaritan emphasizing the irreplaceable nature of human compassion It presents theological and ethical criteria to guide the responsible use of AI in healthcare ensuring that technology serves rather than supplants the dignity of human relationships This book is essential reading for theologians ethicists healthcare professionals and AI developers navigating the intersection of faith ethics and emerging technology As healthcare increasingly integrates AI Cura Animarum challenges readers to consider where technology supports human dignity and where it threatens to erode the essence of genuine care Is AI merely a tool or does it risk redefining what it means to care   Artificial Inteligence and Data Science Dr. Nibedita Das, Dr. S M P Qubeb, Keerthi Amistapuram, Dr. Ramesh Kumar Yadav ,2025-11-11 This course introduces the core concepts of Artificial Intelligence AI and Data Science covering intelligent problem solving machine learning techniques statistical analysis and data driven decision making Topics include supervised and unsupervised learning neural networks data preprocessing visualization predictive modeling and AI applications Students learn to build models analyze datasets and apply AI tools to solve real world problems across domains such as healthcare finance automation and computing   Advanced AI: A Modern Technology Mrs. Archana Pudi, Naga Charan Nandigama, Mrs. Anju Gopi, Ms. R M. Tharsanee,2026-01-20 Advanced AI A Modern Technology explores the advanced concepts architectures and applications of artificial intelligence in today s digital era The subject covers deep learning neural networks natural language processing computer vision reinforcement learning and generative models It emphasizes modern AI frameworks large scale data processing and cloud based AI deployment The course also examines ethical AI explainability bias mitigation and responsible innovation It prepares learners to design develop and implement intelligent systems for real world industrial and research applications   **Electricity Markets with Increasing Levels of Renewable Generation: Structure, Operation, Agent-based Simulation, and Emerging Designs** Fernando Lopes,Helder Coelho,2018-02-14 This book describes the common ground between electricity markets EMs and software agents or artificial intelligence generally It presents an up to date introduction to EMs and intelligent agents and offers a comprehensive description of the research advances and key achievements related to existing and emerging market designs to reliably and efficiently manage the potential challenges of variable generation VG Most EMs are unique in their complex relationships between economics and the physics of energy but were created without the notion that large penetrations of variable generation VG would be part of the supply mix An advanced multi agent approach simulates the behavior of power markets over time particularly markets with large scale penetrations of renewable resources It is intended as a reference book for researchers academics and industry practitioners but given the scope of the chapters and the highly accessible style the book also provides a coherent foundation for several different graduate courses   **Statistical Relational Artificial Intelligence** Luc De Raedt,Kristian Kersting,Sriraam Natarajan,David Poole,2016-03-24 An intelligent agent interacting with the real world will encounter individual people courses test results drugs prescriptions chairs boxes etc and needs to reason

about properties of these individuals and relations among them as well as cope with uncertainty Uncertainty has been studied in probability theory and graphical models and relations have been studied in logic in particular in the predicate calculus and its extensions This book examines the foundations of combining logic and probability into what are called relational probabilistic models It introduces representations inference and learning techniques for probability logic and their combinations The book focuses on two representations in detail Markov logic networks a relational extension of undirected graphical models and weighted first order predicate calculus formula and Problog a probabilistic extension of logic programs that can also be viewed as a Turing complete relational extension of Bayesian networks   *Intelligence artificielle et emploi en Afrique* Ibrahim Kalil Konaté,Michel Boukar,2025-10-10 Ce livre tudie les effets de l intelligence artificielle IA et de la digitalisation sur l emploi en Afrique en usant d une m thodologie deux articulations D une part l analyse des effets directs de l IA destruction d emplois traditionnels dans des secteurs cl s agriculture PME et distribution et d emplois peu qualifi s automatisation des t ches r p titives mutations et adaptation des agents aux nouveaux emplois des technologies de l information D autre part des tudes de cas et des donn es empiriques permettent d valuer cette destruction d emplois et les facteurs att nuants r silience des march s du travail africain innovations sociales et recommandations strat giques pour dig rer les d fis de la digitalisation et favoriser un d veloppement inclusif et durable de l IA en Afrique   **Rational Learning** Jonathan Matthew Gratch,Gerald DeJong,University of Illinois at Urbana-Champaign. Department of Computer Science,1993 The agent must posses sic deliberative capabilities to assess the relative merits of these actions in the larger context of its overall behavior and resource constraints We present an algorithm that embodies these ideas within the area of speed up learning This algorithm automatically assesses the benefits and costs of learning and flexibly allocates resources to learning depending on the resource demands of the current situation We evaluate the algorithm in the real world domain of scheduling space craft data transmissions   International Conference on Multi Agent Systems IEEE Computer Society,1998 This volume on multi agent systems is suitable for researchers professors practitioners students and other computing professionals   ICMAS--95, First International Conference on Multi-Agent Systems Victor Lesser,1995 June 12 14 1995 San Francisco The first international conference on multiagent systems is organized as a joint effort of the North American Distributed Artificial Intelligence community the Japanese Multiagent and Cooperative Computing community and the European Modeling Autonomous Agents in a Multiagent World community with support from AAAI and sanctioned by ECCAI The Proceedings cover a broad spectrum of perspectives including artificial life communications issues and negotiation strategies Topics cover Agent Architectures Artificial Life from a multiagent perspective Believable Agents Cooperation Coordination and Conflict Communcation Issues Conceptual and Theoretical Foundations of Multiagent Systems Development and Engineering Methodologies Distributed Artificial Intelligence Distributed Consensus and Algorithms for Multiagent Interaction Distributed Search Evaluation of Multiagent Systems Integrated Testbeds and Development
