*Mini/Micro '82*, 1982      Relational Database Writings, 1994-1997 C. J. Date, Hugh Darwen, D. McGoveran, 1998 Chris Date is a name synonymous with relational database technology all over the world and he enjoys a reputation for his ability to explain complex technical material in a clear and understandable fashion Here are selected writings by Date the fifth in a series of books based on papers by the specialist      **New Generation Computer Systems** Yungui Ci, 1989 Proceedings of the international conference held in Beijing April 17-21 1989 Topics covered include knowledge representation knowledge base systems intelligent environment knowledge acquisition on parallel architecture computation models Prolog machines knowledge base machines functional      **Proceedings of the ... International Conference on Information and Knowledge Management**, 2005      **The Alternating Fixpoint of Logic Programs with Negation** Allen Van Gelder, 1989

Unlike the closely related well founded partial models and stable models the alternating fixpoint partial model's definition is fully constructive. The principal contributions of this work are 1 that the alternating fixpoint partial model is identical to the well founded partial model and 2 that alternating fixpoint is at least as expressive as fixpoint logic on all structures. Essentially fixpoint logic permits rule bodies to be first order formulas but requires inductive relations to be positive within them. We also show that on finite structures fixpoint logic is as expressive as alternating fixpoint logic.
