**Software Engineering for Manufacturing Systems** A. Storr, D.H. Jarvis, 2013-03-09 Software has become a decisive cost and time factor in regard to developing and establishing manufacturing systems and setting them into operation. In addition, software determines the availability, reliability, as well as functionality of manufacturing units. Software Engineering for Manufacturing Systems considers the methods and procedures required to deal with problems in the software engineering of control technology for manufacturing systems. Significantly, the following topics are addressed: definitions and requirements of software for control technology; system design; describing forms of control software; CASE tools for the generation of a code configuration; adaption of standard software variants and re-usability of software and man-machine interface. It contains the selected proceedings of the International Conference on Software Engineering and Case Tools for Control Technology of Manufacturing Systems, sponsored by the IFIP and held in Germany in March 1996.
