

Designation: E11 – 20

Standard Specification for Woven Wire Test Sieve Cloth and Test Sieves¹

This standard is issued under the fixed designation E11; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

This standard has been approved for use by agencies of the U.S. Department of Defense.

1. Scope²

1.1 This document specifies the technical requirements for: the woven wire test sieve cloth (sieve cloth) used in test sieves, the construction of test sieves, standard and non-standard test sieve frame sizes, and test procedures used to inspect sieve cloth and the test sieves. This specification applies to test sieves manufactured with sieve cloth having a nominal aperture size ranging from 125 millimetres (mm) down to 20 micrometres (μm).

1.2 Additional reference information can be found in Specifications E161, E323, E2016, and in Test Methods C430 and E2427.

1.3 The values stated in SI units shall be considered standard for the dimensions of the sieve cloth openings and the wire diameters used in the sieve cloth. The values stated in inch-pound units shall be considered standard with regard to the sieve frames, pans, and covers.

1.4 This standard does not purport to address all of the safety concerns, if any, associated with its use. It is the responsibility of the user of this standard to establish appropriate safety, health, and environmental practices and determine the applicability of regulatory limitations prior to use.

1.5 This international standard was developed in accordance with internationally recognized principles on standardization established in the Decision on Principles for the Development of International Standards, Guides and Recommendations issued by the World Trade Organization Technical Barriers to Trade (TBT) Committee.

Particle size measurement Terence Allen, 2013-11-21 Although man's environment from the interstellar dust to the earth beneath his feet is composed to a large extent of finely divided material his knowledge of the properties of such materials is surprisingly slight For many years the scientist has accepted that matter may exist as solids liquids or gases although the dividing line between the states may often be rather blurred this classification has been upset by powders which at rest are solids when aerated may behave as liquids and when suspended in gases take on some of the properties of gases It is now widely recognized that powder technology is a field of study in its own right The industrial applications of this new science are far reaching The size of fine particles affects the properties of a powder in many important ways For example it determines the setting time of cement the

hiding power of pigments and the activity of chemical catalysts the taste of food the potency of drugs and the sintering shrink age of metallurgical powders are also strongly affected by the size of the particles of which the powder is made up Particle size measurement is to powder technology as thermometry is to the study of heat and is in the same state of flux as thermometry was in its early days Only in the case of a sphere can the size of a particle be completely described by one number
