## Case Study One: Margaret

In most cases, psychologists draw their diagnostics by conducting an interview with their clients like the one conducted by Louise on Margaret. This is based on the fact that understanding one's problem from the horse's mouth is easier. There are various factors that may be deduced from such an assessment. For example, Louise was able to identify many changes that her client has undergone and the difficulty she faces in dealing with them.

There are also social factors that cannot be understood otherwise that impact greatly on many people with psychological disturbances. It was also as a result of this assessment that the client reported her recent memory loss, which shows her awareness of her abnormal conditions. Therefore, this assessment was meant to determine what ails Margaret and thereafter draw some useful therapies to help her go back to normalcy.

In her conclusion, Louise drew some conclusions concerning Margaret's condition. Margaret reported some changes in her menstrual periods. She noticed a change in her moods which has partly contributed to her moodiness, although this could be a result of hormonal imbalance due to menopause, considering Margaret's age.
