

Cell Transport Review Worksheet

Complete the table by checking the correct column for each statement:

Statement	Isotonic solution	Hypotonic solution	Hypertonic solution
Causes a cell to swell		x	
Doesn't change the shape of a cell	x		
Causes osmosis	x	x	x
Causes a cell to shrink			x

Match the term with its correct description:

- | | |
|--------------------------|---------------------|
| a. energy | e. active transport |
| b. facilitated diffusion | f. exocytosis |
| c. endocytosis | g. carrier protein |
| d. passive transport | h. channel protein |

H Transport protein that provides a tube-like opening in the plasma membrane through which particles can diffuse

A Is used during active transport but not passive transport

C Process by which a cell takes in material by forming a vacuole around it

D Particle movement from an area of higher concentration to an area of lower concentration

F Process by which a cell expels wastes from a vacuole

B A form of passive transport that uses transport proteins

E Particle movement from an area of lower concentration to an area of higher concentration

G Transport protein that changes shape when a particle binds with it

Match the term with its correct description:

- | | |
|----------------------|----------------|
| a. transport protein | e. osmosis |
| b. active transport | f. endocytosis |
| c. diffusion | g. exocytosis |
| d. passive transport | h. equilibrium |

E The diffusion of water through a cell membrane

D The movement of substances through the cell membrane without the use of cellular energy

A Used to help substances enter or exit the cell membrane

B When energy is required to move materials through a cell membrane

H When the molecules of one substance are spread evenly throughout another substance to become balanced

G A vacuole membrane fuses (becomes a part of) the cell membrane and the contents are released

F The cell membrane forms around another substance, for example, how the amoeba gets its food

C When molecules move from areas of high concentration to areas of low concentration

Label the diagrams of cells using the following terms: diffusion, active transport, osmosis, equilibrium. The arrows show the direction of transport. You may use the terms more than once!

Cell Membrane Transport Arnost Kotyk,2012-12-06 TO THE SECOND EDITION When preparing the manuscript for the original edition of this book we were only partly aware of the pace at which the field of membrane transport was developing and at which new ideas as well as new techniques would be applied to it The fact is that some of the chapters are now outdated e g the one on the molecular aspects of transport and many others require revision in the light of new information that has appeared in the past five years However it is also true that we overemphasized in the first edition certain points that now appear less important and underestimated the impact of certain others that have since assumed a position among the most forcefully discussed topics of membrane research In making amends it was thus thought useful to include the discussion of these latter problems both in the theoretical and in the comparative sections and on the other hand to omit some of the less topical subjects There was a different reason for rewriting the section on kidney and for dropping the section on mitochondria The help of an expert nephrologist was enlisted for improving chapter 24 while it was decided that mitochondria represent a special field both conceptually being only subcellular particles and methodologically more indirect estimation techniques being involved than with whole cells or tissues and that more adequate information can be found in treatises specializing in work with mitochondria **Holt Biology Chapter 41 Resource File: Nervous System** Holt Rinehart & Winston,Holt, Rinehart and Winston Staff,2004 **Cell Membrane Transport** Arnošt Kotyk,Dr. Karel Janáček,1972
