

Chapter 11 Introduction to Genetics

Section Review 11-1

Reviewing Key Concepts

Short Answer On the lines provided, answer the following questions.

1. State Mendel's principle of dominance.

Mendel's principle of dominance states that some alleles are dominant + others are recessive.

2. Which two combinations of alleles could produce a trait controlled by a dominant allele?

A + trait if there are 2 dominant or 1 dominant + 1 recessive alleles present.

3. What combination of alleles could produce a trait controlled by a recessive allele?

A + trait controlled by a recessive allele will be produced only when 2 recessive alleles are present.

4. Explain segregation of alleles, using pea plant traits in your example.

Segregation is the process during gamete formation in which the two alleles are separated from each other so that each gamete carries only a single copy of each gene.

Reviewing Key Skills

5. Applying Concepts Explain how Mendel's experiments would have been different if he had not worked with true-breeding plants.

True breeding plants allowed Mendel to pinpoint the cause of variation in traits b/c he could control which plants bred. w/o true-breeding plants, Mendel would not have been able to draw his conclusion b/c there would be too many variables.

6. Comparing and Contrasting Explain the difference between cross-pollination and self-pollination in plants.

Cross-pollination is the process of one plant fertilizing another, while self-pollination occurs when a plant fertilizes itself.

7. Calculating One fourth of the plants resulting from a certain cross are expected to show a trait controlled by a recessive allele. If 675 plants resulting from the cross display a trait controlled by a dominant allele, how many plants will show the trait controlled by the recessive allele?

225 plants will show the trait controlled by the recessive allele.

8. Applying Concepts If one of the plants used in the F_1 cross had TT alleles and was combined with a plant with Tt alleles, would the trait controlled by the recessive allele have been produced in the resulting F_2 generation? Explain your answer.

The trait controlled by the recessive allele would not have been produced in the resulting F_2 generation. Both F_1 generation plants need to have Tt allele combinations for the trait controlled by the recessive allele to be produced in one of the F_2 generation plants.

An Introduction to Molecular Medicine and Gene Therapy Thomas F. Kresina, 2001 An Introduction to Molecular Medicine and Gene Therapy Edited by Thomas F Kresina Ph D Gene therapy or the use of genetic manipulation for disease treatment is derived from advances in genetics molecular biology clinical medicine and human genomics Molecular medicine the application of molecular biological techniques to disease treatment and diagnosis is derived from the development of human organ transplantation pharmacotherapy and elucidation of the human genome An Introduction to Molecular Medicine and Gene Therapy provides a basis for interpreting new clinical and basic research findings in the areas of cloning gene transfer and targeting the applications of genetic medicine to clinical conditions ethics and governmental regulations and the burgeoning fields of genomics biotechnology and bioinformatics By dividing the material into three sections an introduction to basic science a review of clinical applications and a discussion of the evolving issues related to gene therapy and molecular medicine this comprehensive manual describes the basic approaches to the broad range of actual and potential genetic based therapies In addition An Introduction to Molecular Medicine and Gene Therapy Covers new frontiers in gene therapy animal models vectors gene targeting and ethical legal considerations Provides organ based reviews of current studies in gene therapy for monogenetic multifactoral or polygenic disorders and infectious diseases Includes bold faced terms key concepts summaries and lists of helpful references by subject in each chapter Contains appendices on commercial implications and a review of the history of gene therapy This textbook offers a clear concise writing style drawing upon the expertise of the authors all renowned researchers in their respective specialties of molecular medicine Researchers in genetics and molecular medicine will all find An Introduction to Molecular Medicine and Gene Therapy to be an essential guide to the rapidly evolving field of gene therapy and its applications in molecular medicine Biology Burton S.

Guttman, Johns W. Hopkins, 1999 This fresh new approach to general biology integrates new research in genetics ecology evolution and molecular biology through four unifying conceptual themes Concepts are covered when appropriate in sufficient but not overwhelming detail The process of scientific discovery is emphasized and active learning is promoted through problem solving exercises in every chapter
