How to Study Public Life Jan Gehl, Birgitte Svarre, 2013-12-04 How do we accommodate a growing urban population in a way that is sustainable equitable and inviting This question is becoming increasingly urgent to answer as we face diminishing fossil fuel resources and the effects of a changing climate while global cities continue to compete to be the most vibrant centers of culture knowledge and finance Jan Gehl has been examining this question since the 1960s when few urban designers or planners were thinking about designing cities for people But given the unpredictable complex and ephemeral nature of life in cities how can we best

design public infrastructure vital to cities for getting from place to place or staying in place for human use Studying city life and understanding the factors that encourage or discourage use is the key to designing inviting public space In *How to Study Public Life* Jan Gehl and Birgitte Svarre draw from their combined experience of over 50 years to provide a history of public life study as well as methods and tools necessary to recapture city life as an important planning dimension This type of systematic study began in earnest in the 1960s when several researchers and journalists on different continents criticized urban planning for having forgotten life in the city City life studies provide knowledge about human behavior in the built environment in an attempt to put it on an equal footing with knowledge about urban elements such as buildings and transport systems Studies can be used as input in the decision making process as part of overall planning or in designing individual projects such as streets squares or parks The original goal is still the goal today to recapture city life as an important planning dimension Anyone interested in improving city life will find inspiration tools and examples in this invaluable guide

Networks, Markets & People Francesco Calabrò, Livia Madureira, Francesco Carlo Morabito, María José Piñeira Mantiñán, 2024-12-01 This book aims to address the issue of the effects that the contemporary environmental technological social and economic global challenges produce on settlement systems communities institutions and enterprises It presents a multi disciplinary scientific debate on the new frontiers of strategic and spatial planning decision support tools and ecological design within the urban rural areas networks and the metropolitan cities of the Mediterranean basin The book focuses on five topics Cultural Heritage as driver of development for territories and tourism destinations Ecosystems people nature cohesion and urban rural relationships Decision Support Systems for urban regeneration Policies and practices of cohesion and social innovation for inclusive cities Green buildings and sustainable solutions for ecological transition In addition the book hosts the papers of a special session intercluster promoted by Italian Society of Architectural Technology SITdA The book benefits all researchers practitioners and policymakers interested in the issue applied to metropolitan cities and marginal areas

Life Between Buildings Jan Gehl, 2011-01-17 The first Danish language version of this book published in 1971 was very much a protest against the functionalistic principles for planning cities and residential areas that prevailed during that period The book carried an appeal to show concern for the people who were to move about between buildings and it urged an understanding of the subtle almost indefinable but definite qualities which have always related to the interaction of people in public spaces and it pointed to the life between buildings as a dimension of architecture that needs to be carefully treated Now 40 years later many architectural trends and ideologies have passed by over the years These intervening years have also shown that the liveliness and liveability of cities and residential areas continues to be an important issue The intensity in which fine public spaces are used at this point in time as well as the greatly increased general interest in the quality of cities and their public spaces emphasises this point The character of life between buildings changes with changes in any given social context but the essential principles and quality criteria to be employed when

working with life between buildings has proven to be remarkably constant Though this work over the years has been updated and revised several times this version bears little resemblance with the very early versions however there was no reason to change the basic message Take good care of the life between your buildings *People Cities* Annie Matan, Peter Newman, 2016-11-15 Over the last 50 years architect Jan Gehl has changed the way that we think about architecture and city planning moving from the Modernist separation of uses to a human scale approach inviting people to use their cities *People Cities* tells the inside story of how Gehl learned to study urban spaces and implement his people centered approach in car dominated cities It discusses the work theory life and influence of Gehl from the perspective of those who have worked with him in cities across the globe It will inspire anyone who wants to create vibrant human scale cities and understand the ideas and work of the architect who has most influenced urban design **Resilient Cities, Second Edition** Peter Newman, Timothy Beatley, Heather Boyer, 2017-06 Drawing from research and examples about resilient cities this book looks at new initiatives and innovations cities can implement **Fundamentals of Planning Cities for Healthy Living** Avi Friedman, Alexandra Pollock, 2022-09-06 The obesity crisis has affected many nations It is also one of the factors listed as contributing cause to the COVID 19 fatalities The common tendency is to blame people s dietary choices and sedentary habits Yet it can also be argued that social inequity and poor urban planning practices have largely contributed to a lack of active lifestyles Low density suburban sprawl long commutes food deserts and diminishing green areas are some aspects that have led to reduced physical activity among residents of all ages The proposed book illustrates the decline of community planning for healthy living and outlines measures that can be reintroduced to foster active lifestyles Each chapter stands for another subject that merits intervention and illustrates strategic approaches Its uniqueness lies in its comprehensiveness It covers the key principles of residential planning and offers principles of neighborhood design along with sustainable strategies as well as their applications The text is not limited to a theoretical aspect but offers contemporary well designed and illustrated examples of communities and firsthand information about them that was obtained through site visits and interviews with their designers **Key Thinkers on Cities** Regan Koch, Alan Latham, 2017-05-22 *Key Thinkers on Cities* provides an engaging introduction to the dynamic intellectual field of urban studies It profiles the work of 40 innovative thinkers who represent the broad reach of contemporary urban scholarship and whose ideas have shaped the way cities around the world are understood researched debated and acted upon Providing a synoptic overview that spans a wide range of academic and professional disciplines theoretical perspectives and methodological approaches the entry for each key thinker comprises A succinct introduction and overview Intellectual biography and research focus An explication of key ideas Contributions to urban studies The book offers a fresh look at well known thinkers who have been foundational to urban scholarship including Jane Jacobs Henri Lefebvre Manuel Castells and David Harvey It also incorporates those who have helped to bring a concern for cities to more widespread audiences such as Jan Gehl Mike Davis and Enrique Pe alosa Notably

the book also includes a range of thinkers who have more recently begun to shape the study of cities through engagements with art architecture computer modelling ethnography public health post colonial theory and more With an introduction that provides a mapping of the current transdisciplinary field and individual entries by those currently involved in cutting edge urban research in the Global North and South this book promises to be an essential text for anyone interested in the study of cities and urban life It will be of use to those in the fields of anthropology economics geography sociology and urban planning

Fundamentals of Sustainable Urban Design Avi Friedman,2020-12-10 This book begins with an introduction describing current societal transformations that merit new urban designs including depletion of non renewable natural resources elevated levels of greenhouse gas emissions large numbers of aging Baby Boomers and climate change Dr Friedman then examines these challenges through thirty chapters of interest to urban designers architects civil and construction engineers and town planners Each of these topics represents an aspect of urban design and describes an innovative solution and offers a detailed description of underlying principles The highly illustrated text presents innovative urban design strategies based on sustainable principles Integrated with each chapter are several international case studies illustrating design implementations

Historic Cities Jeff Cody,Francesco Siravo,2019-07-30 This new volume in the GCI s Readings in Conservation series brings together a selection of seminal writings on the conservation of historic cities This book the eighth in the Getty Conservation Institute s Readings in Conservation series fills a significant gap in the published literature on urban conservation This topic is distinct from both heritage conservation and urban planning despite the recent growth of urbanism worldwide no single volume has presented a comprehensive selection of these important writings until now This anthology profusely illustrated throughout is organized into eight parts covering such subjects as geographic diversity reactions to the transformation of traditional cities reading the historic city the search for contextual continuities the search for values and the challenges of sustainability With more than sixty five texts ranging from early polemics by Victor Hugo and John Ruskin to a generous selection of recent scholarship this book thoroughly addresses regions around the globe Each reading is introduced by short prefatory remarks explaining the rationale for its selection and the principal matters covered The book will serve as an easy reference for administrators professionals teachers and students faced with the day to day challenges confronting the historic city under siege by rampant development
