Chirlian, 1982 **Integration of Renewable Sources of Energy** Felix A. Farret, M. Godoy Simoes, 2017-07-05. The latest tools and techniques for addressing the challenges of 21st century power generation, renewable sources, and distribution systems. Computational methods for multi-domain modeling of integrated energy systems and the solution of power electronics engineering problems are described in detail. Chapters follow a consistent format featuring a brief introduction to the theoretical background, a description of problems to be solved, as well as objectives to be achieved. Multiple block diagrams, electrical circuits, and mathematical analysis and/or computer code are provided throughout. And each chapter concludes with discussions of lessons learned, recommendations for further studies, and suggestions for experimental work. Key topics covered in detail include: Integration of the most usual sources of electrical power and related thermal systems; Equations for energy systems and power electronics focusing on state space and power circuit oriented simulations; MATLAB and Simulink models and functions and their interactions with real-world implementations using microprocessors and microcontrollers; Numerical integration techniques; transfer function modeling; harmonic analysis and power quality performance assessment; MATLAB Simulink Power Systems Toolbox and PSIM for the simulation of power electronic circuits including renewable energy sources such as wind and solar sources.
