Introduction To Building Technology:

Construction Technology Eric Fleming, 2009-02-12 This new textbook provides a comprehensive introduction to every aspect of the technology of low rise construction. It includes sub structure, site work, setting out and foundations and superstructure, flooring, roofs, finishes, fittings and fixtures. The material here covers the first year course requirement of all courses on which construction technology is taught, no matter what the ultimate qualification. It offers tried and tested solutions to a range of construction problems and is organised following the sequence of construction. It will show what has been done in the past, demonstrating good practice, what works and what doesn't, and common faults. There are summaries of the more important BSI documents and reference to the latest building regulations. Lengthy explanations are avoided by relying heavily on hundreds of illustrations, pairing detail drawings with clear photographs to show real life construction situations. Introduction to Architectural Technology William McLean, 2008-10-06 Understanding the relationship between design and technology is critical to the understanding of architecture. Aimed clearly at architectural students, this book provides an accessible introduction to all aspects of architectural technology: structural physics, structural elements and forms, heating, lighting, environmental control and computer modeling. As well as providing a clear grounding in these topics, it will also help students to integrate their design thinking with appropriate structural and environmental solutions. The book sets out to explain the relationships between physical phenomena, materials, building elements and structural types using simple classification systems and real world examples. Photographs are used to familiarize the user with common construction technology while historical examples are employed to chart significant moments in the history of architectural engineering. Every topic area is accompanied by a set of cross references for further reading and research. In addition, this volume explores current computer techniques for assisting students to predict the structural and environmental behavior of buildings. It also uses historical precedents to explain how the success of a technology is directly related to its cultural context. Written by three experienced teachers, this book will be invaluable for those contemplating the study of architecture and for those already embarked on such a course.
