momentum in various engineering domains to represent and reuse semantic patterns with effective applicability. However, the actual scope of feature application is still very limited. Semantic Modeling and Interoperability in Product and Process Engineering provides a systematic solution for the challenging engineering informatics field, aiming at the enhancement of sustainable knowledge representation, implementation, and reuse in an open and yet practically manageable scale. This semantic modeling technology supports uniform, multi-facet and multi-level collaborative system engineering with heterogeneous computer-aided tools such as CAD/CAM, CAE, and ERP. This presented unified feature model can be applied to product and process representation, development, implementation, and management. Practical case studies and test samples are provided to illustrate applications which can be implemented by the readers in real-world scenarios. By expanding on well-known feature-based design and manufacturing approaches, Semantic Modeling and Interoperability in Product and Process Engineering provides a valuable reference for researchers, practitioners, and students from both academia and engineering fields.

Fundamentos de Balanços de Energia Isabel M. A. Fonseca, Ana Paula Egas, 2009-12-01. Fundamentos de Balanços de Energia: um manual que aborda de uma forma simples e pedagógica a realização de balanços energéticos em sistemas em estado estacionário. O manual cobre uma parte significativa dos programas das disciplinas de Análise de Sistemas Químicos e Biológicos e Termodinâmica dos atuais Mestrados Integrados em Engenharia Química e Engenharia do Ambiente. O texto inicia-se com um conjunto fundamental de conceitos e definições que suportam a aplicação do princípio da conservação da energia ou seja a realização de balanços energéticos. Em seguida apresenta-se a equação geral dum balanço de energia e aplica-se a sistemas particulares que não envolvem reação química. O cálculo das entalpias abordado com detalhe em processos a temperatura variável e pressão constante nos processos de mudança de fase e de mistura. A última parte debruça-se sobre balanços de entalpia em sistemas onde ocorre reação química sendo dado particular relevo à definição dos estados de referência na determinação dos vários termos da equação do balanço. Ao longo do texto feita referência aos vários problemas que se encontram resolvidos na última secção e que têm como objetivo sedimentar a informação apresentada.
