Restructuring Trade Agreements Juscelino F. Colares, Mustafa T. Durmuş, 2021-07-27 To avoid trade bargain erosion countries involved in large scale bilateral or regional trade arrangements must reconcile preserving close economic ties and supply chains with the need to dynamically adjust to new opportunities with other partners Using the growing deterioration of the European Union Turkey Customs Union as an illustration to a new model of trade agreement restructuring this well researched and deeply insightful book outlines and demonstrates how this trade arrangement can be successfully renegotiated thus providing expert practical guidance in a crucial area of trade law and policy that rarely receives the attention it deserves The book s novel framework features a clearly articulated legal foundation a transactional deployment strategy and a sequential negotiating approach applicable to bilateral and regional trade arrangements whose original terms no longer reflect the changed capabilities and interests of at least one of its parties The authors respond in detail to questions such as When should a country pursue bargain rebalancing How should trade diplomats pursue renegotiation and or new partnerships legally and transactionally Given that free trade agreements keep each country s trade sovereignty mostly intact under which circumstances should a country ever consider entering a customs union How may free trade agreements help countries address trade imbalances while enhancing supply chain resilience What are the limits to WTO litigation as an effective market barrier opening tool How should trade agreement restructuring be deployed as a path to further trade liberalization In depth attention is paid to identifying and investigating trade arrangements that are ripe for renegotiation and assessing sources of domestic and external support for or against renegotiating such bargains This book s model of international trade agreement restructuring fits well with emerging thinking on greater trade diversification and supply chain resilience The authors provide a clear actionable approach for considering and conducting the renegotiation of trade deals For these reasons this book will be welcomed by trade lawyers supply chain executives economists government officials and academics who are grappling with rising economic frictions in the fault lines of national sovereignty economic interdependence and the limits of current trade arrangements *Monetary*

Economics Wynne Godley, Marc Lavoie, 2007 This book challenges the mainstream paradigm which is based on the intertemporal optimisation of welfare by individual agents It introduces a new methodology for studying how it is institutions which create flows of income expenditure and production together with stocks of assets including money and liabilities thereby determining how whole economies evolve through time Starting with extremely simple stock flow consistent SFC models the text describes a succession of increasingly complex models Solutions of these models are used to illustrate ways in which whole economies evolve when shocked in various ways Readers will be able to download all the models and explore their properties for themselves A major conclusion is that economies require management via fiscal and monetary policy if full employment without inflation is to be achieved
