Book Description

Vulnerability researchers are in increasingly high demand as the number of security incidents related to crime continues to rise with the adoption and use of technology. To begin your journey of becoming a security researcher you need more than just the technical skills to find vulnerabilities; you'll need to learn how to adopt research strategies and navigate the complex and frustrating process of sharing your findings. This book provides an easy-to-follow approach that will help you understand the process of discovering, disclosing, and publishing your first zero-day vulnerability through a collection of examples and an in-depth review of the process. You'll begin by learning the fundamentals of vulnerabilities, exploits, and what makes something a zero-day vulnerability. Then you'll take a deep dive into the details of planning winning research strategies, navigating the complexities of vulnerability disclosure, and publishing your research with sometimes less-than-receptive vendors. By the end of the book, you'll be well-versed in how researchers discover, disclose, and publish vulnerabilities, navigate complex vendor relationships, receive credit for their work, and ultimately protect users from exploitation. With this knowledge, you'll be prepared to conduct your own research and publish vulnerabilities. What you will learn:

- Find out what zero-day vulnerabilities are and why it's so important to disclose and publish them
- Learn how vulnerabilities get discovered and published
- Explore successful strategies for starting and executing vulnerability research
- Discover ways to disclose zero-day vulnerabilities responsibly
- Populate zero-day security findings into the CVE databases
- Navigate and resolve conflicts with hostile vendors
- Publish findings and receive professional credit for your work

Who this book is for: This book is for security analysts, researchers, penetration testers, software developers, IT engineers, and anyone who wants to learn how vulnerabilities are found and then disclosed to the public. You'll need intermediate knowledge of operating systems, software, and interconnected systems before you get started. No prior experience with zero-day vulnerabilities is needed, but some exposure to vulnerability scanners and penetration testing tools will help accelerate your journey to publishing your first vulnerability.
