

Computer Networks – Answer Key

PART A (3 Marks Each)

1. 1. Define Computer Network

A computer network is a group of interconnected devices that can communicate and share resources (such as files, printers, and internet access). These devices are connected using communication channels like cables or wireless signals.

2. 2. What is POP?

POP (Post Office Protocol) is an email protocol used to retrieve emails from a remote server to a local client. The most common version is POP3, which downloads emails and often deletes them from the server afterward.

3. 3. Write about Hamming Code

Hamming code is an error-detection and error-correction code used in digital communication. It adds redundant bits to data bits so that errors can be detected and corrected. It can detect up to two-bit errors and correct single-bit errors.

4. 4. Define Quality of Service (QoS)

QoS refers to the performance level of a service, such as guaranteed bandwidth, latency, jitter, and error rates in a network. It's crucial for real-time applications like VoIP and video streaming.

5. 5. Difference between CSMA Collision Detection and Collision Avoidance

- Collision Detection (CD): Used in wired networks (e.g., Ethernet). Devices listen for collisions during transmission and stop if one occurs.
- Collision Avoidance (CA): Used in wireless networks. Devices try to avoid collisions by checking if the medium is free before transmitting.

6. 6. Define Tunneling

Tunneling is a method of encapsulating data packets within another packet to enable secure or specialized transmission over incompatible networks (e.g., VPNs using tunneling).

7. 7. Any two differences between Connection-Oriented and Connectionless Services

- Connection-Oriented: Establishes a connection before data transfer (e.g., TCP).
- Connectionless: No prior setup, sends data directly (e.g., UDP).
- Connection-Oriented ensures reliable delivery; connectionless does not.

8. 8. List the Multicast Routing Protocols
