

### Figure 20.10 The Business Cycle and the Real Business Cycle Model

(a) Business Cycle

The business cycle is a fluctuation in the level of aggregate output and employment. The business cycle is characterized by four phases: expansion, peak, contraction, and trough.

The expansion phase is characterized by a steady increase in aggregate output and employment. The peak phase is characterized by a steady increase in aggregate output and employment, but the rate of increase is slowing down.

The contraction phase is characterized by a steady decrease in aggregate output and employment. The trough phase is characterized by a steady decrease in aggregate output and employment, but the rate of decrease is slowing down.

The business cycle is a result of the interaction of various factors, including changes in aggregate demand, changes in aggregate supply, and changes in government policy.

Figure 20.10 (a) Business Cycle

The real business cycle model is a model of the business cycle that is based on the interaction of various factors, including changes in aggregate demand, changes in aggregate supply, and changes in government policy.

The real business cycle model is a model of the business cycle that is based on the interaction of various factors, including changes in aggregate demand, changes in aggregate supply, and changes in government policy.

The real business cycle model is a model of the business cycle that is based on the interaction of various factors, including changes in aggregate demand, changes in aggregate supply, and changes in government policy.
