

Economics
Hand-out Pt 1

Trade and Specialization:

1. In the 19th century, global capitalism generated two poles: the CORE and the PERIPHERY. The core consisted of industrialized countries that produced finished manufactured goods. The periphery was much of Africa, Asia, and Latin America that produced raw materials and agricultural products. This international division of labor lasted until the mid-20th century.
2. In the mid-20th century, some countries in the periphery began to partially industrialize. These newly industrialized countries specialized in labor-intensive industries, such as textiles, apparel, and electronics.
3. Towards the end of the 20th century, global supply chains emerged. Some low-value-added manufacturing that mainly required semi-skilled cheap labor was offshored to the periphery; while high-value added services that were skill and knowledge-intensive remained in the core. In the newly emerging global supply chains, the core maintained dominance in activities that generated high profit margin, while periphery specialized in activities with lower profit margins.
4. The "smile curve" shows the new trend. The sophisticated design (patent and technology) as well as marketing operations (brand and service) remain in the core, while fabrication or physical production is offshored to the periphery.
