Problems

Background

Genetic proteins are the main structural components of living cells. In addition, they have the catalytic and regulatory functions of the living "factory". First, the specific sequence of amino acids determines the structure of the polypeptide chain. Second, the specific sequence of amino acids determines the specific three-dimensional structure of the polypeptide chain. Third, the specific sequence of amino acids determines the specific biological function of the polypeptide chain. The polypeptide chain is the basic unit of protein synthesis. The polypeptide chain is the basic unit of protein synthesis.

Explain how you will investigate the synthesis of protein in cells.
