[Ion Implantation and Synthesis of Materials](#) Michael Nastasi, James W. Mayer, 2007-05-16 Ion implantation is one of the key processing steps in silicon integrated circuit technology Some integrated circuits require up to 17 implantation steps and circuits are seldom processed with less than 10 implantation steps Controlled doping at controlled depths is an essential feature of implantation Ion beam processing can also be used to improve corrosion resistance to harden surfaces to reduce wear and in general to improve materials properties This book presents the physics and materials science of ion implantation and ion beam modification of materials It covers ion solid interactions used to predict ion ranges ion straggling and lattice disorder Also treated are shallow junction formation and slicing silicon with hydrogen ion beams Topics important for materials modification such as ion beam mixing stresses and sputtering are also described

[Materials Processing Handbook](#) Joanna R. Groza, James F. Shackelford, 2007-03-28 The field of materials science and engineering is rapidly evolving into a science of its own While traditional literature in this area often concentrates primarily on property and structure the Materials Processing Handbook provides a much needed examination from the materials processing perspective This unique focus reflects the changing complex

**From Additive Manufacturing to 3D/4D Printing 2**

Jean-Claude André, 2017-11-29 Additive manufacturing which was first invented in France and then applied in the United States is now 33 years old and represents a market of around 5 billion euros per year with annual growth of between 20 and 30% Today additive manufacturing is experiencing a great amount of innovation in its processes software engineering and materials used Its strength as a process has more recently allowed for the exploration of new niches ranging from applications at nanometer and decameter scales to others in mechanics and health As a result the limitations of the process have also begun to emerge which include the quality of the tools their cost of manufacture the multi material aspects functionalities and surface conditions Volume 2 of this series presents the current techniques improvements and limits of additive manufacturing providing an up to date review of this process

[Case Studies in Micromechatronics](#) Stephanus Büttgenbach, Iordania Constantinou, Andreas Dietzel, Monika Leester-Schädel, 2020-05-15 The book Case Studies in Micromechatronics From Systems to Process offers prominent sample applications of micromechatronic systems and the enabling fabrication technologies The chosen examples represent five main fields of application consumer electronics

pressure sensor mobility and navigation acceleration sensor handling technology and automation micro gripper laboratory diagnostics point of care system and biomedical technology smart skin These five sample systems are made from different materials requiring a large variety of modern fabrication methods and design rules which are explained in detail As a result an inverted introduction from prominent applications to base technologies is provided Examples of applications are selected to offer a broad overview of the development environment of micromechatronic systems including established as well as cutting edge microfabrication technologies
