Chapter 2: Probability, Statistics, and Traffic Theories

- P2.1.** A random number generator produces numbers between 1 and 99. If the current value of the random variable is 45, then what is the probability that the next randomly generated value for the same random variable, will also be 45. Explain clearly.

[Solution]

Let the random variable be X such that $1 \leq X \leq 99$.
Current value of

Since the value of generation of random numbers is independent of the previous generation, the probability of generating 45 again is the same as for the first time. Hence,

$$P(X = 45) = \frac{1}{99}.$$

- P2.2.** A random digit generator on a computer is activated three times consecutively to simulate a random three-digit number.
- (a) How many random three-digit numbers are possible?
 - (b) How many numbers will begin with the digit 2?
 - (c) How many numbers will end with the digit 9?
 - (d) How many numbers will begin with the digit 2 and end with the digit 9?
 - (e) What is the probability that a randomly formed number ends with 9 given that it begins with a 2?

[Solution]

- (a) 900
- (b) 100
- (c) 90
- (d) 10
- (e) 1/10

- P2.3.** A snapshot of the traffic pattern in a cell with 10 users of a wireless system is given as follows:

Smart Grid Stephen F. Bush, 2014-03-31 This book bridges the divide between the fields of power systems engineering and computer communication through the new field of power system information theory Written by an expert with vast experience in the field this book explores the smart grid from generation to consumption both as it is planned today and how it will evolve tomorrow The book focuses upon what differentiates the smart grid from the traditional power grid as it has been known for the last century Furthermore the author provides the reader with a fundamental understanding of both power systems and communication networking It shows the complexity and operational requirements of the evolving power grid the so called smart grid to the communication networking engineer and similarly it shows the complexity and operational requirements for communications to the power systems engineer The book is divided into three parts Part One discusses the basic operation of the electric power grid covering fundamental knowledge that is assumed in Parts Two and Three Part Two introduces communications and networking which are critical enablers for the smart grid It also considers how communication and networking will evolve as technology develops This lays the foundation for Part Three which utilizes communication within the power grid Part Three draws heavily upon both the embedded intelligence within the power grid and current research anticipating how and where computational intelligence will be implemented within the smart grid Each part is divided into chapters and each chapter has a set of questions useful for exercising the readers understanding of the material in that chapter Key Features Bridges the gap between power systems and communications experts Addresses the smart grid from generation to consumption both as it is planned today and how it will likely evolve tomorrow Explores the smart grid from the perspective of traditional power systems as well as from communications Discusses power systems communications and machine learning that all define the smart grid It

Mobile Evolution Sebastian Thalanany,2015-03-02 This book presents insights interpretations concepts and interdependent views in the landscape of mobile connectivity and service that emphasize the significance of a harmonious interplay cooperation and coalescing of a variety of interdisciplinary domains of science and art Mobile Evolution Insights on Connectivity and Service explores the forward looking and enabling capabilities of mobile connectivity and service in the context of long term evolution LTE systems and multimedia services as viewed through a lens of human experience It provides information and guidelines pertaining to the strategies and technologies associated with the next generation mobile ecosystem

Mobile and Pervasive Computing in Construction Chimay J. Anumba,Xiangyu Wang,2012-09-04 Construction researchers and industry practitioners have begun to explore the possibilities offered by mobile and pervasive computing in architecture engineering and construction AEC It is expected that the construction industry will be keen to apply these technologies as they promise significant benefits in areas such as materials management project management distributed collaboration and information management all leading to improvements in productivity This book offers a comprehensive reference volume to the use of mobile and pervasive computing in construction Based on contributions from a mix of leading researchers and experts from academia and industry it provides up to date insights into current research topics in this field as well as the latest technological advancements and practical examples The chapters introduce the key theoretical concepts in mobile and pervasive computing and highlight the applications and solutions which are available to the construction industry More specifically the book focuses on the manner in which these technologies can be applied to improve practices in construction and related industries This book will be of particular interest to academics researchers and graduate students at universities and industrial practitioners seeking to apply mobile and pervasive computing systems to improve construction industry productivity

Transportation and Information Piyushimita (Vonu) Thakuriah,D. Glenn Geers,2013-06-18 Transformations in wireless connectivity and location aware technologies hold the promise of bringing a sea change in the way transportation information is generated and used in the future Sensors in the transportation system when integrated with those in other sectors for example energy utility and health have the potential to foster novel new ways of improving livability and sustainability The end result of these developments has been somewhat contradictory Although automation in the transportation environment has become increasingly widespread the level of involvement and active participation by people in terms of co creation and contribution of information has also increased As a result the following two major trends have been observed 1 increases in Machine to Machine M2M communications and 2 increases in the variety and volume of User Generated Content In this transportation paradigm the pervasive use of Information and Communication Technologies will serve as the foundation for mobility intelligence towards an ubiquitous information centered mobility environment However many technical and operational questions as well as social management and legal challenges present themselves in the transformation to this vision The book
