Electrohydrodynamics:

Electrohydrodynamics Antonio Castellanos,1998-10-27 The aim of this book is to provide both the non specialist and the specialist in EHD with the ability to extract meaningful information from his her experimental data and acquire a good physical understanding by applying the ideas presented in this book In addition to providing the scientific background it is also intended to take the reader to the frontiers of research in this field so they may go without effort into the specialized literature This book may be considered as complementary to the excellent treatment of EHD made in the classical book Continuum Electromechanics by Melcher in that care has been taken to avoid overlapping of the subjects In case a topic is treated in both texts the results presented in the book by Melcher serve as an introduction to the more advanced treatment presented in this book

Electrohydrodynamics in Dusty and Dirty Plasmas H. Kikuchi,2013-03-09 This monograph is the first book exclusively devoted to Electrohydrodynamics in Dusty and Dirty Plasmas with extended Electrodynamics and Gravito Electrodynamics with Electric Mirrors The book incorporates novel concepts of Electro Cusp Reconnection and Generalized Critical Ionization Velocities as well as modern concepts of Self Organization and Chaos Therefore the book is special and quite different from the previous edition in the field of plasma physics in terms of scope object and approach The scope of the present work is much broader and much more general with space and laboratory applications including collisional neutral and partially ionized gases in electric and space charge fields thereby accompanying electrical charging electrification discharge ionization and recombination The book will serve as a text book text related or reference book for graduate students post graduates and scientists in geo astro space and laboratory plasma physics electromagnetics and fluid dynamics In addition it will be useful for researchers outside the plasma community who wish to obtain new physical insights aspects and points of view

Electrohydrodynamic Patterning of Functional Materials Pola Goldberg Oppenheimer,2013-07-23 This thesis explores a route to induce and control the structure formation process in thin films by the use of strong electric fields We investigate establish and apply the use of the electrohydrodynamic EHD lithography as a versatile patterning tool on the sub micrometre and nanometre length scales for functional materials Thin films are ubiquitous they are found in nature and used in almost every aspect of daily life While film instabilities are often undesirable

in nature and technology they can be utilized to produce structures by precisely controlling the destabilization of the film EHD lithography utilizes instabilities induced by means of an electric field to fabricate periodic structures EHD patterning is set to become a competitive candidate for low cost lithographic technology for a number of applications Herein the applied potential of this lithographic process is explored by expanding its applicability to a broad range of materials and by a simultaneous patterning of multilayer systems or functional polymers yielding hierarchical architectures with novel functionalities EHD pattern formation enables for instance the fabrication of multi scale structured arrays as surface enhanced Raman scattering SERS active platforms Furthermore crystalline and conductive polymers are patterned using the EHD approach and the underlying structure formation mechanisms are discussed This extension towards functional material systems offers interesting prospects for potential applications Findings of this thesis are very promising for use in optoelectronic devices
