BOOST CONVERTER FOR PHOTOVOLTAIC APPLICATIONS T. Arun Kumari, 2023-02-16 Energy production by utilizing solar power is being improved tremendously nowadays The PV generated output is less and to boost up the voltage DC DC converters are utilized and hence it plays an important role There are many types of converters here I have utilized Single Ended Primary Inductor Converter SEPIC with Voltage Tripler VT technique Then the converter is tested with DC power supply as input under open loop and closed loop applications And finally the converter is tested with Photo Voltaic PV source as input The proposed converters operating principle design consideration performance analysis simulative results and hardware analysis is detailed

Analytical and Experimental Analysis of Buck-boost DC-DC Converter in Photovoltaic (PV) Maximum Power Point Tracking Application Mohd Nasrul Izzani Jamaludin, 2017 The objectives of this project are to design and develop a Buck Boost DC DC converter for MPP Tracker Application using MATLAB Simulink to develop a Buck boost DC DC converter hardware for MPPT application to analyze the performance of PV system with direct load connection and PV system with MPP tracker at different level of irradiance to analyze the MPP tracker with Buck Boost DC DC converter performance in terms of conversion efficiency and tracking capabilities

Implementation of a PV Module-Integrated Dual-Boost DC-AC Converter-Based Isolated Microinverter for Grid-Connected Application Kamalathiyagarajan Sarasagopalan, Chitra Selvi Shokkalingam, 2020 In this article a Photovoltaic PV array integrated dual boost dc ac converter operating as an isolated single phase microinverter is presented to track and export the power produced on the PV array to grid and load The single phase microinverter which utilizes the cascaded connection of the dc dc

converter rectifier and an inverter offers high boosting gain with low duty ratio. However, the cascaded connection of the converters offers low conversion efficiency that is due to the usage of an increased number of power switching devices. The proposed isolated dual boost microinverter is designed to offer high Maximum Power Point Tracking efficiency, high conversion ratio, and high conversion efficiency with a reduced number of switches and passive elements. The design considerations and six different modes of the microinverter are presented. The simulated and experimental results are presented to investigate the proposed dual boost DC-AC converter operated microinverter.

Design, Simulation and Implementation of MPPT Controlled Buck-Boost Converter Extracting Power From Solar Panel for Microgrid Applications
Pooja Ainapure, Pranav Kulkarni, Swapnil U, Atul Tiwari, 2020

The work is dedicated to implementation of DC-DC converter for PV system in medium power Microgrid applications. Due to availability of flexible power management strategies along with effective cost, microgrids are gaining immense popularity in present days. DC Microgrid mainly consists of PV system and battery system. Battery system plays a very important role in improving dynamic response of the Microgrid. While designing power modulators for DC storage system, efficiency is a major concern. This paper proposes a method for modeling, simulation, and hardware implementation of PV system and maximum power point tracking using Buck-Boost converter. Since PV cells have poor efficiency, it is necessary to operate them at maximum power point using incremental conductance. The converter topology used here is Modified Buck-Boost Converter. All the simulations were carried out on MATLAB using variable parameters, and the hardware results were verified on the PV arrays along with PV panel simulator.

Robust Control of a Multi-phase Interleaved Boost Converter for Photovoltaic Application Using λ -synthesis Approach
Badur Mueedh Alharbi, 2020

The high demand of energy efficiency has led to the development of power converter topologies and control system designs within the field of power electronics. Recent advances of interleaved boost converters have shown improved features between the power conversion topologies in several aspects, including power quality, efficiency, sustainability, and reliability. Interleaved boost converter with multi-phase technique for PV system is an attractive area for distributed power generation. During load variation or power supply changes due to weather changes, the output voltage requires a robust control to maintain stable and perform robustness. Connecting converters in series and parallel have the advantages of modularity, scalability, reliability, distributed location of capacitors, which make it favorable in industrial applications. In this dissertation, a design of synthesis controller is proposed to address the design specification of multi-phase interleaved boost converter at several power applications. This thesis contributes to the ongoing research on the IBC topology by proposing the modeling, applications, uses, and control techniques to the stability challenges. The research proposes a new strategy of robust control applied to a non-isolated DC-DC interleaved boost converter with a high step voltage ratio as multi-phase multi-stage, which is favorable for PV applications. The proposed controller is designed based on synthesis technique to approach a high regulated output voltage, better efficiency, gain, a fast regulation response against disturbance, and load variation with a better

dynamic performance and achieve robustness The controller has been simulated using MATLAB Simulink software and validated through experimental results which show the effectiveness and the robustness

Design of DC-TO-DC Boost Converter for Photovoltaic Application ,2014

Modeling, Design and Control of Advanced Soft-switching Boost Converters for PV-based Battery Charging Systems ,2019

The use of Photo Voltaic PV systems in battery charging applications has been on the rise for the past decade A PV module generates direct current and relatively low voltage this voltage needs to be increased and stabilized using a DC DC converter before charging a battery load Due to the intermittent nature of the PV system the input voltage varies with respect to weather conditions therefore it is vital to control and adjust the output voltage In this work we first utilize a switch mode DC DC boost converter with a proposed feedback control for a solar battery charging system A fixed frequency compensated voltage mode controller is designed and implemented for a DC DC boost converter operating in Continuous Conduction Mode CCM Secondly we design a full wave quasi resonant DC DC boost converter as a softswitching technique to increase the efficiency of DC DC converter by reducing the switching losses is proposed To achieve the soft switching functionality for the DC DC boost converter and to regulate a stable output voltage a frequency control technique is proposed in this work The proposed control strategy justifies both frequency and the duty cycle of the Pulse Width Modulated PWM control signal which in turn controls the switching of the converter s switches Finally an interleaved DC DC quasi resonant boost converter for PV based battery charging is proposed to increase the efficiency of the battery charger system by reducing the ripple across the battery load The topology of the circuit implements a Maximum Power Point Tracking MPPT algorithm at a specified solar irradiation The control technique proposes a solution to obtain maximum voltage using Perturb and Observation PO method obtains a conversion ratio for the converter topology and applies frequency modulation to regulate the output voltage in order to design a robust charger Matlab Simscape toolbox is used to conduct the simulation studies evaluating the performance of the proposed circuit topologies and controllers for a PV based battery charging system
