market Also the intense world wide competition in today s service industry motivates many companies to reengineer their old fashioned processes to achieve new heights of success The study is therefore undertaken to investigate what could be the root cause employee resistance to change when deploying strategies such as Business process reengineering in Opportunity International Savings and Loans Ltd The study was designed as a quantitative survey with questionnaires as the means of data gathering Using the simple random sampling method the study selected 300 respondents from OISL out of a population of 750 The simple random sampling method was used to avoid bias in the sampling and ultimately the results The study used the SPSS and Microsoft Excel to analyse the data From the analyses of data the study concluded that the principal causes of employee resistance were inadequate training the perception that the change process is an imposition and the changes being inconvenient the daily routine of employees In addition technical hitches and wrong timing leads to resistance to change Using the ADKAR model the study also concluded that employee involvement communication and training are clearly the weaknesses of the change management methodology of the case study organization The study also concluded that necessary support OISL management provide for employees during the implementation of business process re engineering were far lower than the expectations of employees The study therefore recommended that adequate training and development democratization of the change process better communication strategy to overcome resistance to change   Automating Business Process Reengineering Gregory A. Rudolf,Stefan Bihler,2006-11-13 Bachelor Thesis from the year 2006 in the subject Business economics Offline Marketing and Online Marketing grade 1 0 Helia University of Business and Applied Sciences course Double degree program in Finnland language English abstract CRM has aroused much interest in various business fields during the last decade and is of high importance in today s businesses Similarly has increased the demand for CRM system by many companies around the world As our sponsors can not recognize this trend in Finland the objective of the study was consequently to explore the weak demand of the CRM system on the Finnish market Accordingly the purpose was to provide a better insight in the until now unexplored Finnish CRM market and in particular in an interesting segment of our sponsor SAP the existing customer base of companies with an ERP system The aim was to examine medium sized ERP operating companies concerning their readiness for a CRM implementation The conceptual framework is based on literature and various articles of avowed authors in the field of CRM and was divided according to the research questions Overall this study is based on two parts the theoretical part which strives to give the necessary background and an empirical part which applies to the findings and analysis of our research Our research methodology was a quantitative one as we used a self completion questionnaire to conduct our survey The research was carried out in form of an online survey and was sent to 78 companies As CRM is a strategic issue we chose respondents from the upper management level mostly managing directors Only these persons were able to give qualitative and valid answers about the current situation in these companies The findings showed that the respondents are aware of the topic CRM and that it is constituted as an important issue for these companies All of the respondents see usefulness in the functions and the support of their business with a CRM system Finally only 10 percent of all participants are not planning to implement any CRM system while 55 percent have already and 35 percent will implement a CRM system in the future The conclusion of the report showed that an obvious trend can be recognized in theses companies towards an implementation of a CRM system More specific 90 percent of the respondents are or will be ready in the next one to three years to take the final step an implementation of a CRM system As a recommendation to our sponsor we suggest to use the by us developed research path for further research in order to get a total overview about the market **Acquiring, Developing, and Implementing Accounting Information Systems** Ulric J. Gelinas,Steve G. Sutton,James E. Hunton,2004 Defense White Paper ,2000 **Business Process Re-engineering** B. C. Glasson,1994 The focus of this publication is BPR Business Process Re engineering and the challenges and opportunities it brings to the field of information systems The key to successful BPR from an information systems perspective is perceived to lie in integration Papers included in the book accordingly consider the following three areas both individually and in combination Business Process Re engineering Information Systems Opportunities or Challenges Information Systems Integration Business Process Re engineering is the restructuring of organizational processes through the innovative use of information systems and technology IS T The aim is to refit or revamp an organization to survive today s economic downturn and to emerge refreshed and re vitalized to meet its

social obligations and accept its economic challenges into the next century Information systems opportunities and challenges facing business process re engineers revolve around integration It is believed that unidimensional specialized segmented and piecemeal approaches have been adopted in IS T which do not work If IS T is to achieve its full potential for social and economic good there is little need for holistic multi dimensional comprehensive approaches IS T researchers and practitioners should look to integrate their efforts with those of others in at least three ways Integrating theory and practice will encourage relevant research and more rapid technology transfer Integrating technical and social aspects will help alleviate those implementation issues that have bedevilled IS T for decades Integrating applications and subject matter will result in synergistic multi disciplinary approaches and solutions combining the interests of the many specialists involved in the field The broad ranging examination of these factors offered by the book highlights the overall need for information systems and technology integration if active responses to the opportunities and challenges presented by Business Process Re engineering are to be achieved   *Formulation, Implementation, and Control of Competitive Strategy* John A.
