information on packaging which is one of the most technologically intensive activities in the electronics industry The  
electronics packaging community has realized that while semiconductor devices continue to be improved upon for  
performance cost and reliability it is the interconnection or packaging of these devices that will limit the performance of the  
systems Technology must develop packaging for transistor chips with high levels of performance and integration providing  
cooling power and interconnection and yet preserve the performance of the semiconductors with minimum package delay to  
the system Trends in each of the major packaging technologies include chip level connection providing the required  
connections between the chip and the semiconductor package The power distribution to the chip and heat removal from the  
chip first level packages providing all the necessary wiring interconnections and power distribution first to second level  
interconnections and second level packages providing all the necessary wiring connections power distribution and power  
supply connection are included as well This book is a useful and informative reference to students or individuals studying or
