Abstract

Acute kidney injury (AKI) is a serious medical condition affecting millions of people. Patients in intensive care unit (ICU) who develop AKI have increased morbidity and mortality, prolonged length of stay in ICU and hospital and increased costs, especially when they require renal replacement therapy. In the latter case, morbidity and mortality increase further. In order to meet the needs of the critically ill patients, a multidisciplinary care team is required, combining the efforts of physicians and nurses from different disciplines as well as nephrologists and intensivists. A personalized patient management is strongly recommended as proposed by the recent criteria of precision medicine. Early identification of patients at risk and timely intervention in case of AKI diagnosis can be obtained by integrating the role of nephrologist in the ICU practice. An innovative model of organization by introducing the nephrology rapid response team is advocated to manage critically ill patients with kidney problems in order to make early diagnosis and interventions, to reduce progression toward CKD and improve renal recovery. The routine adoption of AKI biomarkers together with such a collegial teamwork may represent the pathway toward success.

Introduction

Acute kidney injury (AKI) is a serious medical condition affecting more than 10 million people around the world [1]. The incidence in the intensive care unit (ICU) population is between 20 and 30% depending on the used definition, and more than 10% of all patients admitted to the ICU require renal replacement therapy (RRT) for AKI [2]. The spectrum of AKI has recently expanded to the phase of recovery that may require a follow up for a period as long as 3 months. In this time window, the syndrome is called acute kidney disease (AKD) [3, 4].

The Rise of Critical Care Nephrology

The diagnosis and management of AKD is complex and requires a multidisciplinary effort, which is the basis for the new specialty called critical care nephrology (CCN). Not only nephrologists but also critical care physicians, cardiologists and cardiac surgeons should be involved collegially in this endeavor [5].

In fact, a multidisciplinary care team can address the multiple needs of a critically ill patients based on the pathophysiological foundations of the syndrome. In this setting, it is essential to identify the population and the single individual at risk of developing AKI [6, 7]. As for mechanical ventilation, the teamwork in CCN could rep-
