Institutional Design and Capacity to Enhance Effective Governance of Oil and Gas Wealth: The Case of Kurdistan Region Khazal Abdullah Auzer, 2017-05-15 This book presents a critical reappraisal of the resource curse thesis and extends the analysis to consider political and social dimensions and thus the importance of structure in the petroleum sector's governance model. It examines major challenges surrounding the governance of petroleum resources and the implications for the economic growth and development of hydrocarbon abundant countries as a result of ineffective economic, political, and social mechanisms. The book subsequently investigates a range of causal factors that may promote or hinder the effective management of oil and gas resources in the Kurdistan Region, which also has implications for the security of the wider region and for global energy security. The book also seeks to arrive at lessons learned and policy guidelines to help inform other new petroleum exporting countries and regions about how to best manage their newfound wealth. *Economic Diversification Policies in Natural Resource Rich Economies* Sami Mahroum, Yasser Al-Saleh, 2016-08-05 Economic diversification remains at the top of the agenda for hundreds of regions around the world. From the single commodity economies of African countries and the Caribbean to the many single industry regions of Europe and North America, as well as the oil and gas rich but volatile hydrocarbon economies, economic diversification policies have been around for almost a century with varying degrees of success and failure. *Economic Diversification Policies in Natural Resource Rich Economies* takes a special interest in the policy experiences of a set of different countries that have extractive industries representing significant drivers of their economies and subsequently are significant contributors to government revenues. It explores twelve cases including upper middle to high income economies such as Canada, Australia, Iceland, and Norway; emerging economies such as Latin America, the GCC, Saudi Arabia, and UAE; Kazakhstan, Malaysia, and Russia; as well as the developing economy of Uganda. Each chapter provides a review of economic diversification experiences, including policy environment, diversification strategies, desired outcomes, the role of government, and a critical evaluation of achievements. This book is suitable for those who study environmental economics, development economics, and resource management. *Handbook of BRICS and Emerging Economies* P. B. Anand, Shailaja Fennell, Flavio Comim, 2021 Ever since Jim O'Neill at Goldman Sachs coined the term BRICS in 2001, there have been many different assessments of these major emerging economies, with some even proclaiming that the promise of the BRICS—comprising Brazil, Russia, India, China, and South Africa—is over. However, the so-called arranged marriage still seems to be working well, with the club having become a formal international forum with summit declarations, ministerial meetings, and numerous BRICS-wide fora. Is this euphoria misplaced? Is there a BRICS model of economic and human development? Are inequalities increasing, and is this the denouement of the economic successes? *The Handbook of BRICS and Emerging Economies* presents a comprehensive and multi-faceted analysis of the BRICS countries and other emerging economies, exploring their economic, social, environmental, and governance dimensions, and

other challenges It brings together multi disciplinary perspectives from more than fifty authors to examine how education contributed to the emergence of BRICS how BRICS are impacting African economies and how other emerging economies including Chile Mexico Turkey and others in Africa and Central Asia compare It observes the impact of governance challenges both within individual countries and in the forum for co operation amongst them what issues related to gender and identity based violence are prevalent and what the security implications are and the role of BRICS is in contributing to peace keeping operations

Diversified Development Indermit S. Natural Resource Management in the Context of Climate Change United Nations Publications,2020 The management of natural resources is directly associated with climate change On the one hand most of the greenhouse gases released in the atmosphere originate from the production transformation and use of natural resources such as coal natural gas and oil On the other hand climate change affects natural resources such as forests and agricultural produce These interactions illustrate the two way relationship between climate change and the commodities sector This paper analyses the ways in which the management of natural resources may impact climate change and how climate change impacts the adaptation strategies of countries industries and farmers that extract or produce primary commodities Resource management is analysed from the perspective of a capital conversion based model of development One important conclusion of the paper is that integrating climate change concerns into resource management implies that some natural resources will need to be stranded in order to meet mitigation commitments compatible with the goal of limiting global warming to well below 2 degrees Celsius and pursuing efforts to limit the increase in the average value of global temperature to 1.5 degrees Celsius above pre industrial levels
