Cybernetics is about having a goal and taking action to achieve that goal Knowing whether you have reached your goal or at least are getting closer to it requires feedback a concept that was made rigorous by cybernetics The subject of Cybernetic Synergy although emanating from a socio economic experiment of economic control by cybernetic means in Chile in the early 1970s has never been approached as an applied subject in its own right Indeed the subject of applied cybernetics has never been addressed as a separate issue although it has been shown that the overall subject of cybernetics applies to a wide range of disciplines from biology to business via mathematics and engineering Cybernetic synergy is the study of relationships and controls of and between corporate entities on an external basis and departments within corporate entities on an internal basis It concerns the decision making process and how decisions can be made based on feedback from any part of the organization being managed It therefore concerns the issue of input of raw material or information the output of the transformed information and materials and the rectification of any issue based on negative feedback related to the productive process It investigates not only the basic theory of the subject but also its applications in the commercial and business environment as well as touching on government and administrative issues where shortcomings have emerged owing to a lack of synergy and communication There are already several books available on the subject to cybernetics but they are all concerned with mathematical approaches along with very heavy technical texts most of which are completely alien to the layman or the simple practitioner Furthermore other than references to business or economic practice in some books there has never been a book published purely about the subject of applied cybernetics relating to business practices The book covers the subjects of management and economic cybernetics and how the theory of cybernetic control can be used to manage business and government functions whether small medium or large It looks at the history of cybernetics and how some pioneering cybernetic concepts were used in Chile in the early 1970s to manage the Chilean economy It uses these same principles along with later cybernetic models to show how such concepts can be applied to the present day economy and business practices It examines present day business practices and shows how weaknesses in these systems can be addressed and eliminated by the application of cybernetic practices The aims of the book are to provide an insight into the subject of management and business cybernetics using the principle of cybernetic synergy to resolve intra corporate issues and create more efficient business practices based on simple command and control processes Essentially this book provides an in depth insight into the use of cybernetics in business and administration environments and would explain how cybernetics is a valuable tool in resolving corporate issues concerning efficiency and overall control It would give a detailed explanation of the various practices and functions involved in business operations and practices Applications of Quality Control in the Service Industries A. C. Rosander,1985-12-20 This book discusses basic concepts principles and quality

characteristics in the service industries an understanding of the techniques and their applications It helps to close the gap between proven principles and successful applications
