Howlett, Rossi Setchi, Barbara Cimatti, 2017-04-25 This volume includes papers presented at the 4th International Conference on Sustainable Design and Manufacturing SDM 17 held in Bologna Italy in April 2017 The conference covered a wide range of topics from cutting edge sustainable product design and service innovation sustainable processes and technology for the manufacturing of sustainable products sustainable manufacturing systems and enterprises decision support for sustainability and the study of the societal impact of sustainability including research for circular economy Application areas are wide and varied and the book provides an excellent overview of the latest research and development in the area of Sustainable Design and Manufacturing Clean Energy Opportunities in Tropical Countries Shaharin A. Sulaiman, 2021-01-21 This book highlights the present scenario of energy demand and power generation technologies in tropical countries The tropics are well known to receive direct sunlight Furthermore different than four season countries tropical countries have a continuous summer like season and therefore they are rich in clean energy sources like solar and biomass Home to 40% of the world s population the demand for energy in these countries keeps increasing With the present serious global concern on the environment the choice of power generation is no doubt the cleanest possible resources This book delves into the opportunity that various tropical countries have in pursuing environmentally friendly power generation systems Computational Fluid Dynamics: An Introduction to Modeling and Applications Imane Khalil, Issam Lakkis, 2023-03-03 A new approach to CFD that leverages modeling software and is light on math This concise highly illustrated resource gets you started using a new streamlined method for approaching

Computational Fluid Dynamics CFD that utilizes commercial software and requires minimal mathematical computations Developed from curricula taught by the authors Computational Fluid Dynamics An Introduction to Modeling and Applications shows how to use high powered numerical analyses and data structures to analyze and solve problems that involve fluid flows and heat transfer You will learn how to use the latest computer programs such as Fluent to perform the complex calculations required Coverage includes Conservation laws in thermal fluid sciences The finite volume method Two dimensional steady state laminar incompressible fluid flow Three dimensional steady state turbulent incompressible fluid flow Convection heat transfer for two dimensional steady state incompressible flow Three dimensional fluid flow and heat transfer modeling in a heat exchanger Three dimensional fluid flow and heat transfer modeling in a heat sink Solving the linear and non linear system of equations Methods for solving Navier Stokes equations And much more *Geometry Repair in Two and Three Dimensions* Rajab Said,1995 **Physics- and Engineering Knowledge-based Geometry Repair System for Robust Parametric CAD Geometrics** Dong Li,2012 [Physics- and Engineering Knowledge-based Geometry Repair System for Robust Parametric CAD Geometrics](#) Dong Li,2012 In modern multi objective design optimisation an effective geometry engine is becoming an essential tool and its performance has a significant impact on the entire process Building a parametric geometry requires difficult compromises between the conflicting goals of robustness and flexibility The work presents a solution for improving the robustness of parametric geometry models by capturing and modelling relative engineering knowledge into a surrogate model and deploying it automatically for the search of a more robust design alternative while keeping the original design intent Design engineers are given the opportunity to choose from a list of optimised designs to balance the robustness of the geometry and the original design intent The prototype system is firstly tested on a 2D intake design repair example and shows the potential to reduce the reliance on human design experts in the conceptual design phase and improve the stability of the optimisation cycle It also helps speed up the design process by reducing the time and computational power that could be wasted on flawed geometries or frequent human interferences A case study of the proposed repair system based on the design and analysis of a three dimensional parametric turbine blade model has been set up An automatic analysis workflow is set up and the results are summarised for setting up a repair database based on surrogate training methods Positive repair results have been achieved and an automatic repair cycle for the blade model is being set up and tested The proposed physics and engineering knowledge based geometry repair system for robust parametric geometries proves an effective tool for ensuring automation robustness and design flexibility **Hybrid Geometry Representations with Applications in Medical Imaging and Model Repair** Stephan Michael Bischoff,2007
