Realizing Complex Integrated Systems Anthony P. Ambler,John W. Sheppard,2025-02-20 The creation of complex integrated systems is in itself complex It requires immense planning and a large team of people with diverse backgrounds based in dispersed geographical locations and countries supposedly working to a coordinated schedule and cost The systems engineering task is not new but recent scales most definitely are The world is now capable of designing and manufacturing systems whose complexity was not considered possible 10 years ago While many are trained to think in terms of a complete system where everything is designed and produced by a single project team today such systems involve integrating subsystems and components which are also complex that have been developed by other project teams Inevitably this introduces additional complexities involving elements out of the direct control of the project but which are essential to its overall success In addition to traditional systems engineering topics of hardware and software design testability and manufacturability there are wider issues to be contemplated project planning communication language an issue for international teams units of measure imperial vs metric used across members of the team supply chains pandemics military action and natural disasters legal issues based on place of production and sale the ethics associated with target use and the threat of cyberattack This book is the first attempt to bring many of these issues together to highlight the
