Approaches To Archaeological Ceramics:

Approaches to Archaeological Ceramics Carla M. Sinopoli, 2013-06-29 More than any other category of evidence ceramics offers archaeologists their most abundant and potentially enlightening source of information on the past Being made primarily of clay a relatively inexpensive material that is available in every region ceramics became essential in virtually every society in the world during the past ten thousand years The straightforward technology of preparing forming and firing clay into hard durable shapes has meant that societies at various levels of complexity have come to rely on it for a wide variety of tasks Ceramic vessels quickly became essential for many household and productive tasks Food preparation cooking and storage the very basis of settled village life could not exist as we know them without the use of ceramic vessels Often these vessels broke into pieces but the virtually indestructible quality of the ceramic material itself meant that these pieces would be preserved for centuries waiting to be recovered by modern archaeologists The ability to create ceramic material with diverse physical properties to form vessels into so many different shapes and to decorate them in limitless manners led to their use in far more than utilitarian contexts Some vessels were especially made to be used in trade manufacturing activities or rituals while ceramic material was also used to make other items such as figurines models and architectural ornaments

Interpreting Silent Artefacts: Petrographic Approaches to Archaeological Ceramics Patrick Sean Quinn, 2010-01-15 This volume presents a range of petrographic case studies as applied to archaeological problems primarily in the field of pottery analysis i.e. ceramic petrography

The Oxford Handbook of Archaeological Ceramic Analysis Alice M. W. Hunt, 2016-12-01 The Oxford Handbook of Archaeological Ceramic Analysis draws together topics and methodologies essential for the socio-cultural mineralogical and geochemical analysis of archaeological ceramic Ceramic is one of the most complex and ubiquitous archaeomaterials in the archaeological record it occurs around the world and through time in almost every culture and context from building materials and technological installations to utilitarian wares and votive figurines For more than 100 years archaeologists have used ceramic analysis to answer complex questions about economy subsistence technological innovation social organization and dating The volume is structured around the themes Research design and data analysis Foundational concepts Evaluating ceramic provenance Investigating ceramic manufacture Assessing vessel function and Dating ceramic assemblages It provides a common vocabulary and offers practical tools and guidelines for ceramic analysis using techniques and methodologies ranging from network analysis and typology to rehydroxylation dating and inductively coupled plasma mass spectrometry Each chapter provides the theoretical background and practical guidelines such as cost and destructiveness of analysis for each technique as well as detailed case studies illustrating the application and interpretation of analytical data for answering anthropological questions

Ceramics EMAC which took place in Lyon France in 2005 The EMAC series of conferences initiated in Rome in 1991 meets every two years in a European city and brings together specialists carrying out research on ancient ceramics using archaeological sciences EMAC provides the opportunity to present and debate recent advances in this field of research from methodological aspects to archaeological studies with fully integrated laboratory approaches **Ceramics and Society**

Valentine Roux, 2019-02-14 Pottery is the most ubiquitous find in most historical archaeological excavations and serves as the basis for much research in the discipline But it is not only its frequency that makes it a prime dataset for such research it is also that pottery embeds many dimensions of the human experience ranging from the purely technical to the eminently symbolic The aim of this book is to provide a cutting edge theoretical and methodological framework as well as a practical guide for archaeologists students and researchers to study ceramic assemblages As opposed to the conventional typological approach which focuses on vessel shape and assumed function with the main goal of establishing a chronological sequence the proposed framework is based on the technological approach Such an approach utilizes the concept of chaîne opératoire which is geared to an anthropological interpretation of archaeological objects The author offers a sound theoretical background accompanied by an original research strategy whose presentation is at the heart of this book This research strategy is presented in successive chapters that are geared to explain not only how to study archaeological assemblages but also why the proposed methods are essential for achieving ambitious interpretive goals In the heated debate on the equation stating that pots equal people which is a rather fuzzy reference to assumed relationships between mostly ethnic groups and pottery technology enables us to propose with conviction the equation pots equal potters In this way a well founded history of potters is able to achieve a much better cultural and anthropological understanding of ancient societies *Innovative Approaches and Explorations in Ceramic Studies*

Sandra L. López Varela, 2017-12-31 This book celebrates thirty years of Ceramic Ecology an international symposium initiated at the 1986 American Anthropological Association Contributions explore the application of instrumental techniques and experimental studies to analyze ceramics and follow innovative approaches to evaluate methods and theories Pots and Potters Prudence M. Valentine Roux, 2019-02-26 Pottery is the most ubiquitous find in most historical archaeological excavations and serves as the basis for much research in the discipline But it is not only its frequency that makes it a prime dataset for such research it is also that pottery embeds many dimensions of the human experience ranging from the purely technical to the eminently symbolic The aim of this book is to provide a cutting edge theoretical and methodological framework as well as a practical guide for archaeologists students and researchers to study ceramic assemblages As opposed to the conventional typological approach which focuses on vessel shape and assumed function with the main goal of establishing a chronological sequence the proposed framework is based on the technological approach Such an approach utilizes the concept of chaîne opératoire which is geared to an anthropological interpretation of archaeological objects The author offers a sound theoretical

background accompanied by an original research strategy whose presentation is at the heart of this book This research strategy is presented in successive chapters that are geared to explain not only how to study archaeological assemblages but also why the proposed methods are essential for achieving ambitious interpretive goals In the heated debate on the equation stating that pots equal people which is a rather fuzzy reference to assumed relationships between mostly ethnic groups and pottery technology enables us to propose with conviction the equation pots equal potters In this way a well founded history of potters is able to achieve a much better cultural and anthropological understanding of ancient societies Pottery in Archaeology Clive Orton,Michael Hughes,2013-05-13 This revised edition provides an up to date account of the many different kinds of information that can be obtained through the archaeological study of pottery It describes the scientific and quantitative techniques that are now available to the archaeologist and assesses their value for answering a range of archaeological questions It provides a manual for the basic handling and archiving of excavated pottery so that it can be used as a basis for further studies The whole is set in the historical context of the ways in which archaeologists have sought to gain evidence from pottery and continue to do so There are case studies of several approaches and techniques backed up by an extensive bibliography **Scientific Analysis of Archaeological Ceramics** Katherine Barclay,2001 The focus of attention in ceramic research is increasingly turning away from duplicative amassing and reporting of material and towards synthetic work This handbook sets out information which might be sought by ceramic analysis and gives broad outlines of the different methods of analysis *Archaeological Ceramics* Simona Scarcella,European Association of Archaeologists. Meeting,2011 This publication originated during a session organized for the 15th European Archaeologist Conference held in Riva del Garda Trento Italy in September 2009 on the The chaîne opératoire approach to ceramics studies It was focused on the concept of the chaîne opératoire as applied in contemporary ceramics studies Particular attention was given to experimental and archaeometrical approaches that allow for a better understanding of the technological aspects of a culture

Materiality, Techniques and Society in Pottery Production Daniel Albero Santacreu,2014-12-02 Daniel Albero Santacreu presents a wide overview of certain aspects of the pottery analysis and summarizes most of the methodological and theoretical information currently applied in archaeology in order to develop wide and deep analysis of ceramic pastes The book provides an adequate framework for understanding the way pottery production is organised and clarifies the meaning and role of the pottery in archaeological and traditional societies The goal of this book is to encourage reflection especially by those researchers who face the analysis of ceramics for the first time by providing a background for the generation of their own research and to formulate their own questions depending on their concerns and interests The three part structure of the book allows readers to move easily from the analysis of the reality and ceramic material culture to the world of the ideas and theories and to develop a dialogue between data and their interpretation Daniel Albero Santacreu is a Lecturer Assistant in the University of the Balearic Islands member of the Research Group Arqueo UIB and the Ceramic

Petrology Group He has carried out the analysis of ceramics from several prehistoric societies placed in the Western Mediterranean as well as the study of handmade pottery from contemporary ethnic groups in Northeast Ghana

Technological Choices and Material Meanings in Early and Middle Bronze Age Hungary Attila Kreiter,2007 This study assesses patterns in technological choices for key cultural groups in Bronze Age Hungary through macroscopic and petrological analyses of ceramic assemblages with a focus on understudied categories such as storage vessels Technological style results in a characteristic way of making pottery through communication of values and beliefs through the generations If technological difference can be identified and is seen as distinctive to a specific cultural group then it follows that by comparing technological traditions it may be possible to distinguish between the different social dynamics of contemporary societies Similarities allow us to assess the nature of social relations between communities This may call into question how traditional studies have constructed typologically defined cultural groups and provide a less fragmented picture of the Bronze Age of Hungary Thus this research is not a methodological study of provenancing ceramics but tries to answer specific archaeological questions through scientific methods
