[Error Control Systems for Digital Communication and Storage](#) Stephen B.

Wicker, 1995 For introductory graduate courses in coding for telecommunications engineering digital communications This introductory text on error control coding focuses on key implementation issues and performance analysis with applications valuable to both mathematicians and engineers

Block Error-Correcting Codes Sebastian Xambo-Descamps, 2003-04-16

Error correcting codes have been incorporated in numerous working communication and memory systems This book covers the mathematical aspects of the theory of block error correcting codes together in mutual reinforcement with computational discussions implementations and examples of all relevant concepts functions and algorithms This combined approach facilitates the reading and understanding of the subject The digital companion of the book is a non printable pdf document with hyperlinks The examples included in the book can be run with just a mouse click and modified and saved by users for their own purpose

Codes for Error Detection Torleiv Klove, 2007 There are two basic methods of error control for communication both involving coding of the messages With forward error correction the codes are used to detect and correct errors In a repeat request system the codes are used to detect errors and if there are errors request a retransmission Error detection is usually much simpler to implement than error correction and is widely used However it is given a very cursory treatment in almost all textbooks on coding theory Only a few older books are devoted to error detecting codes This book begins with a short introduction to the theory of block codes with emphasis on the parts important for error detection The weight distribution is particularly important for this application and is treated in more detail than in most books on error

correction A detailed account of the known results on the probability of undetected error on the q ary symmetric channel is also given

Error-Control Coding for Data Networks Irving S. Reed, Xuemin Chen, 2012-12-06 The purpose of *Error Control Coding for Data Networks* is to provide an accessible and comprehensive overview of the fundamental techniques and practical applications of the error control coding needed by students and engineers An additional purpose of the book is to acquaint the reader with the analytical techniques used to design an error control coding system for many new applications in data networks Error control coding is a field in which elegant theory was motivated by practical problems so that it often leads to important useful advances Claude Shannon in 1948 proved the existence of error control codes that under suitable conditions and at rates less than channel capacity would transmit error free information for all practical applications The first practical binary codes were introduced by Richard Hamming and Marcel Golay from which the drama and excitement have infused researchers and engineers in digital communication and error control coding for more than fifty years Nowadays error control codes are being used in almost all modern digital electronic systems and data networks Not only is coding equipment being implemented to increase the energy and bandwidth efficiency of communication systems but coding also provides innovative solutions to many related data networking problems

Error Correction Coding Todd K. Moon, 2020-12-22 Providing in depth treatment of error correction *Error Correction Coding Mathematical Methods and Algorithms* 2nd Edition provides a comprehensive introduction to classical and modern methods of error correction The presentation provides a clear practical introduction to using a lab oriented approach Readers are encouraged to implement the encoding and decoding algorithms with explicit algorithm statements and the mathematics used in error correction balanced with an algorithmic development on how to actually do the encoding and decoding Both block and stream convolutional codes are discussed and the mathematics required to understand them are introduced on a just in time basis as the reader progresses through the book The second edition increases the impact and reach of the book updating it to discuss recent important technological advances New material includes Extensive coverage of LDPC codes including a variety of decoding algorithms A comprehensive introduction to polar codes including systematic encoding decoding and list decoding An introduction to fountain codes Modern applications to systems such as HDTV DVBT2 and cell phones *Error Correction Coding* includes extensive program files for example C code for all LDPC decoders and polar code decoders laboratory materials for students to implement algorithms and an updated solutions manual all of which are perfect to help the reader understand and retain the content The book covers classical BCH Reed Solomon Golay Reed Muller Hamming and convolutional codes which are still component codes in virtually every modern communication system There are also fulsome discussions of recently developed polar codes and fountain codes that serve to educate the reader on the newest developments in error correction

Error-Correction Coding for Digital Communications George C. Clark Jr., J. Bibb Cain, 1981-06-30 Error correction coding is being used on an almost routine basis in most new communication systems Not

only is coding equipment being used to increase the energy efficiency of communication links but coding ideas are also providing innovative solutions to many related communication problems Among these are the elimination of intersymbol interference caused by filtering and multipath and the improved demodulation of certain frequency modulated signals by taking advantage of the natural coding provided by a continuous phase Although several books and numerous articles have been written on coding theory there are still noticeable deficiencies First the practical aspects of translating a specific decoding algorithm into actual hardware have been largely ignored The information that is available is sketchy and is widely dispersed Second the information required to evaluate a particular technique under situations that are encountered in practice is available for the most part only in private company reports This book is aimed at correcting both of these problems It is written for the design engineer who must build the coding and decoding equipment and for the communication system engineer who must incorporate this equipment into a system It is also suitable as a senior level or first year graduate text for an introductory one semester course in coding theory The book uses a minimum of mathematics and entirely avoids the classical theorem proof approach that is often seen in coding texts
