Multilevel Analysis Joop J. Hox,Mirjam Moerbeek,Rens van de Schoot,2010-09-13 This practical introduction helps readers apply multilevel techniques to their research Noted as an accessible introduction the book also includes advanced extensions making it useful as both an introduction and as a reference to students researchers and methodologists Basic models and examples are discussed in non

technical terms with an emphasis on understanding the methodological and statistical issues involved in using these models. The estimation and interpretation of multilevel models is demonstrated using realistic examples from various disciplines. For example, readers will find data sets on stress in hospitals, GPA scores, survey responses, street safety, epilepsy, divorce, and sociometric scores to name a few. The data sets are available on the website in SPSS, HLM, MLwiN, LISREL, and/or Mplus files. Readers are introduced to both the multilevel regression model and multilevel structural models. Highlights of the second edition include two new chapters: one on multilevel models for ordinal and count data (Ch 7) and another on multilevel survival analysis (Ch 8). Thoroughly updated chapters on multilevel structural equation modeling reflect the enormous technical progress of the last few years. The addition of some simpler examples to help the novice, whilst the more complex examples that combine more than one problem, have been retained. A new section on multivariate meta-analysis (Ch 11) is included. Expanded discussions of covariance structures across time and analyzing longitudinal data where no trend is expected. Expanded chapter on the logistic model for dichotomous data and proportions with new estimation methods. An updated website at <http://www.joophox.net> with data sets for all the text examples and up-to-date screen shots and PowerPoint slides for instructors. Ideal for introductory courses on multilevel modeling and/or ones that introduce this topic in some detail, taught in a variety of disciplines including psychology, education, sociology, the health sciences, and business. The advanced extensions also make this a favorite resource for researchers and methodologists in these disciplines. A basic understanding of ANOVA and multiple regression is assumed. The section on multilevel structural equation models assumes a basic understanding of SEM.

Multilevel Modeling Douglas A. Luke, 2019-12-24. Multilevel Modeling is a concise practical guide to building models for multilevel and longitudinal data. Author Douglas A. Luke begins by providing a rationale for multilevel models, outlines the basic approach to estimating and evaluating a two-level model, discusses the major extensions to mixed effects models, and provides advice for where to go for instruction in more advanced techniques. Rich with examples, the Second Edition expands coverage of longitudinal methods, diagnostic procedures, models of counts, Poisson power analysis, cross-classified models, and adds a new section on presenting modeling results. A website for the book includes the data and the statistical code, both R and Stata, used for all of the presented analyses.

Multilevel Modeling Techniques and Applications in Institutional Research Joe L. Lott, James S. Antony, 2012-07-17. Multilevel modeling is an increasingly popular multivariate technique that is widely applied in the social sciences. Increasingly, practitioners are making instructional decisions based on results from their multivariate analyses, which often come from nested data that lend themselves to multilevel modeling techniques. As data-driven decision making becomes more critical to colleges and universities, multilevel modeling is a tool that will lead to more efficient estimates and enhance understanding of complex relationships. This volume illustrates both the theoretical underpinnings and practical applications of multilevel modeling in IR. It introduces the fundamental concepts of multilevel modeling techniques in a conceptual and technical manner, providing a range of examples of nested models that are based on

linear and categorical outcomes it then offers important suggestions about presenting results of multilevel models through charts and graphs This is the 154th volume of this Jossey Bass quarterly report series Always timely and comprehensive New Directions for Institutional Research provides planners and administrators in all types of academic institutions with guidelines in such areas as resource coordination information analysis program evaluation and institutional management
