Advances In Cryptology Eurocrypt 2004:

Advances in Cryptology - EUROCRYPT 2004 Christian Cachin, Jan Camenisch, 2004-04-16 These are the proceedings of Eurocrypt 2004 the 23rd Annual Eurocrypt Conference. The conference was organized by members of the IBM Zurich Research Laboratory in cooperation with IACR the International Association for Cryptologic Research.

The conference received a record number of 206 submissions out of which the program committee selected 36 for presentation at the conference. Three papers were withdrawn by the authors shortly after submission. These proceedings contain revised versions of the accepted papers. These revisions have not been checked for correctness and the authors bear full responsibility for the contents of their papers. The conference program also featured two invited talks. The first one was the 2004 IACR Distinguished Lecture given by Whitfield Diffie. The second invited talk was by Ivan Damgård who presented Paradigms for Multiparty Computation. The traditional rump session with short informal talks on recent results was chaired by Arjen Lenstra. The reviewing process was a challenging task and many good submissions had to be rejected. Each paper was reviewed independently by at least three members of the program committee and papers co-authored by a member of the program committee were reviewed by at least six other members. The individual reviewing phase was followed by profound and sometimes lively discussions about the papers which contributed a lot to the quality of the final selection. Extensive comments were sent to the authors in most cases.

Emerging Security Algorithms and Techniques Khaleel Ahmad, M. N. Doja, Nur Izura Udzir, Manu Pratap Singh, 2019-05-20 Cyber security is the protection of information systems hardware software and information as well from theft damages interruption or misdirection to any of these resources. In other words cyber security focuses on protecting computers networks programs and data in use in rest in motion from unauthorized or unintended access change or destruction. Therefore strengthening the security and resilience of cyberspace has become a vital homeland security mission.

Cyber security attacks are growing exponentially Security specialists must occupy in the lab concocting new schemes to preserve the resources and to control any new attacks Therefore there are various emerging algorithms and techniques viz DES AES IDEA WAKE CAST5 Serpent Algorithm Chaos Based Cryptography McEliece Niederreiter NTRU Goldreich Goldwasser Halevi Identity Based Encryption and Attribute Based Encryption There are numerous applications of security algorithms like cyber security web security e commerce database security smart card technology mobile security cloud security digital signature etc The book offers comprehensive coverage of the most essential topics including Modular Arithmetic Finite Fields Prime Number DLP Integer Factorization Problem Symmetric Cryptography Asymmetric Cryptography Post Quantum Cryptography Identity Based Encryption Attribute Based Encryption Key Management Entity Authentication Message Authentication Digital Signatures Hands On SageMath This book serves as a textbook reference book for UG PG PhD students Teachers Researchers and Engineers in the disciplines of Information Technology Computer Science and Engineering and Electronics and Communication Engineering

Identity-based Cryptography Marc Joye, Gregory Neven, 2009 What if your public key was not some random looking bit string but simply your name or email address This idea put forward by Adi Shamir back in 1984 still keeps cryptographers busy today Some cryptographic primitives like signatures were easily adapted to this new identity based setting but for others including encryption it was not until recently that the first practical solutions were found The advent of pairings to cryptography caused a boom in the current state of the art is this active subfield from the mathematical background of pairing and the main cryptographic constructions to software and hardware implementation issues This volume bundles fourteen contributed chapters written by experts in the field and is suitable for a wide audience of scientists grad students and implementors alike Book Jacket

Verifiable Composition of Signature and Encryption Laila El Aimani, 2017-10-27 This monograph gives a thorough treatment of the celebrated compositions of signature and encryption that allow for verifiability that is to efficiently prove properties about the encrypted data This study is provided in the context of two cryptographic primitives 1 designated confirmer signatures an opaque signature which was introduced to control the proliferation of certified copies of documents and 2 signcryption a primitive that offers privacy and authenticity at once in an efficient way This book is a useful resource to researchers in cryptology and information security graduate and PhD students and security professionals

Lattice-Based Cryptosystems Jiang Zhang, Zhenfeng Zhang, 2020-10-14 This book focuses on lattice based cryptosystems widely considered to be one of the most promising post quantum cryptosystems and provides fundamental insights into how to construct provably secure cryptosystems from hard lattice problems The concept of provable security is used to inform the choice of lattice tool for designing cryptosystems including public key encryption identity based encryption attribute based encryption key change and digital signatures Given its depth of coverage the book especially appeals to graduate students and young researchers who plan to enter this research area
