Robotics Software Engineering Ivano Malavolta, Federico Ciccozzi, Christopher Timperley, Alwin Hoffmann, 2025-11-03

Increasingly challenging domains employ robotic applications. Yet Robotics still is one of the most challenging domains for software engineering. Deploying robotics applications requires integrating solutions from experts in various domains including navigation path planning, manipulation, localization, human robot interaction, etc. Integration of modules contributed by respective domain experts is one of the key challenges in engineering software centric systems, yet only one of the cross cutting software concerns crucial to robotics. As robots often operate in dynamic, partially observable environments, additional challenges include adaptability, robustness, safety, and security. The goal of this Research Topic is to bring together researchers with practitioners to identify new frontiers in robotics software engineering, discuss challenges raised by real world applications, and transfer the latest insights from research to industry. This Research Topic welcomes contributions from both academic and industrial participants, thus fostering active synergy between the two communities. We seek contributions addressing, but not limited to, the following topics related to robotics software engineering:

- Analysis of challenges in robotic software engineering
- Architectures that lead to reusable robotic software
- Challenges for defining and integrating domain specific languages for the design of robotic systems
- Continuous integration and deployment in robotics
- Identification and analysis of design principles promoting quality of service e.g. performance, energy efficiency
- Engineering the collaboration of multiple heterogeneous robots
- Machine learning for safety critical robotic systems
- Metrics to measure non functional properties e.g. robustness, availability, etc. and their application in robotic software
- Best practices in engineering robotic software
- Variability, modularity, and reusability in robotic software
- Validation and verification of robotic software
- Processes and tools supporting the engineering and development of robotic systems
- State of the art research projects, innovative ideas, and field based studies in robotic software engineering
- Lessons learned in the engineering and deployment of large scale real world integrated robot
