

Chapter 9: Cellular Respiration and Fermentation

- 9.1 *Explain how the redox reactions of catabolic pathways yield energy by oxidizing organic fuels.*
- 9.2 *Trace the pathway of glucose oxidation during glycolysis.*
- 9.3 *Describe the oxidation of pyruvate and the process by which further oxidation occurs in the citric acid cycle.*
- 9.4 *Identify the steps of oxidative phosphorylation and account for the total ATP produced per glucose molecule during cellular respiration.*
- 9.5 *Name two types of fermentation and explain how they result in ATP production.*
- 9.6 *Use examples to illustrate the interactions of glycolysis and the citric acid cycle with other metabolic pathways.*

Although this is a challenging topic, it will give you the background necessary to understand much about energy transfer at the cellular level. Each concept builds on the previous concept, so take your time working through the figures and text, and you will find you have mastered a difficult area of biology when you finish.

Study Tip: Before getting involved with the details of cellular respiration, take a second to look at the big picture as shown in Figure 9.1. Both photosynthesis (the topic for Chapter 10) and cellular respiration are key ecological concepts involved with energy flow. Use Figure 9.1 to label the indicated parts in the following figure.

Formal Ontology in Information Systems P. Garbacz, O. Kutz, 2014-09-05 Formal Ontology in Information Systems FOIS is the flagship conference of the International Association for Ontology and its Applications IAOA. Its interdisciplinary research focus lies at the intersection of philosophical ontology, linguistics, logic, cognitive science, and computer science, as well as in the applications of ontological analysis to conceptual modeling, knowledge engineering, knowledge management, information systems development, library and information science, scientific research, and semantic technologies in general. As in previous years, FOIS 2014 was a nexus of interdisciplinary research and communication. The current proceedings is divided into four main sections dealing with foundations, processes, agency, and dispositions, methods and tools, and applications. The last of these covers a broad spectrum of areas including, in particular, biology and medicine, engineering, and economy. For the first time in its history, the conference hosted a special track: an ontology competition, the aim of which was to encourage authors to make their ontologies publicly available and to allow them to be evaluated according to a set of predetermined criteria. Papers discussing these ontologies can also be found in this volume. The book will be of interest to all those whose work involves the application of ontologies and who are looking for a current overview of developments in formal ontology.
